 Patent No. 5879892

GENERAL INFORMATION:

APPLICANT: Van Baren, Nicolas  
 APPLICANT: Coulie, Pierre G.  
 APPLICANT: De Smet, Charles  
 APPLICANT: Lucas, Sophie  
 APPLICANT: Boon, Thierry  
 TITLE OF INVENTION: LEUKEMIA ASSOCIATED GENES  
 NUMBER OF SEQUENCES: 16  
 CORRESPONDENCE ADDRESSES:  
 ADDRESSEE: Wolf, Greenfield & Sacks, P.C.  
 STREET: 600 Atlantic Avenue  
 CITY: Boston  
 STATE: MA  
 COUNTRY: US

COMPUTER READABLE FORM:

Database :

1: PIR\_73:\*  
2: PIR2:\*  
3: PIR3:\*  
4: PIR4:\*

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

 CC -1- FUNCTION: SEMENOGELIN I IS THE PREDOMINANT PROTEIN IN HUMAN SEMEN.  
 CC IT PARTICIPATES IN THE FORMATION OF A GEL MATRIX ENTRAPPING THE  
 CC ACCESSORY GLAND SECRETIONS AND EJACULATED SPERMATOZOA. FRAGMENTS  
 CC OF SEMENOGELIN AND/OR FRAGMENTS OF THE RELATED PROTEINS MAY  
 CC CONTRIBUTE TO THE ACTIVATION OF PROGRESSIVE SPERM MOVEMENTS AS  
 CC THE GEL-FORMING PROTEINS ARE FRAGMENTED BY THE KALLIKREIN-LIKE  
 CC PROTEASE.  
 CC -1- FUNCTION: ALPHA-INHIBIN-92 AND ALPHA-INHIBIN-31, DERIVED FROM  
 CC THE PROTEOLYTIC DEGRADATION OF SEMENOGELIN, INHIBIT THE SECRETION  
 CC OF PITUITARY FOLLICLE-STIMULATING HORMONE.  
 CC -1- SUBUNIT: OCCURS IN DISULFIDE-LINKED COMPLEXES WHICH MAY ALSO  
 CC CONTAIN TWO LESS ABUNDANT 71- AND 76-KDA SEMENOGELIN-RELATED  
 CC POLYPEPTIDES.  
 CC -1- TISSUE SPECIFICITY: SEMINAL VESICLE.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -!- FUNCTION: TRYPTASE IS THE MAJOR NEUTRAL PROTEASE PRESENT IN MAST
CC CELLS AND IS SECRETED UPON THE COUPLED ACTIVATION-DEGRANULATION
CC RESPONSE OF THIS CELL TYPE.
CC -!- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|- , Lys-|- , but
CC with more restricted specificity than trypsin.
CC -!- SUBUNIT: HOMOTETRAMER.
CC -!- SUBCELLULAR LOCATION: RELEASED FROM THE SECRETORY GRANULES UPON
CC MAST CELL ACTIVATION.
CC -!- POLYMORPHISM: There are two alleles, beta-II and beta-III which
CC differ by 3 residues.
CC -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. TRYPTASE SUBFAMILY.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PT New vaccine for treatment of Schistosoma infections contains a  
PT recombinant fusion protein comprising cercarial elastase fused  
PT to bacterial, phage or viral protein -  
XX  
PS Claim 3; Page 17; 26pp; English.  
XX  
CC The invention provides a vaccine comprising a recombinant fusion protein  
CC capable of eliciting immunity against Schistosoma parasites. The fusion  
CC protein comprises the 27 or 28 kDa cercarial elastase sequence of  
CC S. mansoni or an active fragment, homologue or variant, fused to a  
CC bacterial, phage or viral protein. The vaccine containing the fusion  
CC protein has been found to induce a significantly increased antibody  
CC response against schistosoma infections, compared to the use of S.  
CC mansoni cercarial elastase in its native form. The present sequence  
CC represents the S. mansoni cercarial elastase protein fragment encoded by  
CC exon 2 of the cercarial elastase gene, used in the fusion protein of the  
CC invention.

XX  
CC The present sequence represents an avermectin aglycon synthase protein.  
CC Also described are: (1) polypeptides encoded by all or part of the DNA;  
CC (2) expression vectors containing the DNA; (3) host cells transformed by  
CC the vectors; (4) preparation of the polypeptides by culture of the  
CC transformants; (5) preparation of avermectin aglycon or its derivatives  
CC by culture of transformed avermectin-producing microorganisms; and (6)  
CC oligonucleotides of 5-60 bases in length containing sense or antisense  
CC sequences from the avermectin aglycon synthase DNA. The enzymes are  
CC useful for the production of modified forms of avermectin and of the  
CC intermediates in its biosynthesis, for use as drugs, veterinary drugs  
CC and agrochemicals.

PT Primer sets for synthesizing polynucleotides, particularly the 5602
PT full-length cDNAs defined in the specification, and for the detection
PT and/or diagnosis of the abnormality of the proteins encoded by the
PT full-length cDNAs -
XX
PS Claim 8; SEQ ID 17122; 2537pp + CD ROM; English.
XX
CC The present invention describes primer sets for synthesizing 5602
CC full-length cDNAs defined in the specification. Where a primer set
CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary
CC to the complementary strand of a polynucleotide which comprises one of
CC the 5602 nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in
CC the specification. The primer sets can be used in antisense therapy and
CC in gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
CC AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632
CC represent oligonucleotides, all of which are used in the exemplification
CC of the present invention.

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensic, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity -
XX

PS Claim 20; SEQ ID NO 44758; 103bp; English.
XX

CC The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensic, gene mapping, identification of mutations in
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

XX
XX
PS Claim 32; Page 203-223; 314pp; Japanese.
XX
CC The present sequence represents an avermectin aglycon synthase protein.
CC Also described are: (1) polypeptides encoded by all or part of the DNA;
CC (2) expression vectors containing the DNA; (3) host cells transformed by
CC the vectors; (4) preparation of the polypeptides by culture of the
CC transformants; (5) preparation of avermectin aglycon or its derivatives
CC by culture of transformed avermectin-producing microorganisms; and (6)
CC oligonucleotides of 5-60 bases in length containing sense or antisense
CC sequences from the avermectin aglycon synthase DNA. The enzymes are
CC useful for the production of modified forms of avermectin and of the
CC intermediates in its biosynthesis, for use as drugs, veterinary drugs
CC and agrochemicals.

XX PS Claim 4; Page 167-180; 257pp; Japanese.
XX CC The present invention relates to the production of modified derivatives
XX CC of avermectin aglycone synthase (AAS) derived from Streptomyces
XX CC avermectilis. The activity of an acyl carrier protein (ACP),
XX CC beta-ketoacyl carrier protein synthase (KS), acyltransferase (AT),
XX CC beta-ketoacyl carrier protein reductase (KR), dehydratase (DH), enoyl
XX CC reductase (ER) and/or thioesterase (TE) domain may be reduced or
XX CC suppressed. The process can be used in the production of drugs, veterinary
XX CC drugs and pesticides. The present sequence is an S. avermectilis protein.

 PT New modified avermectin aglycone synthase derived from Streptomyces  
 PT avermitilis used in production of 22,23-dihydroavermectin B1a used in  
 PT drugs and pesticides -  
 XX Claim 5; Page 235-248; 257pp; Japanese.  
 CC The present invention relates to the production of modified derivatives  
 CC of avermectin aglycone synthase (AAS) derived from Streptomyces  
 CC avermitilis. The activity of an acyl carrier protein (ACP),  
 CC beta-ketocacyl carrier protein synthase (KS), acyltransferase (AT),  
 CC beta-ketocacyl carrier protein reductase (KR), dehydratase (DH), enoyl  
 CC reductase (ER) and/or thioesterase (TE) domain may be reduced or  
 CC suppressed. The process can be used in the production of drugs, veterinary  
 CC drugs and pesticides. The present sequence is derived from an S.  
 CC avermitilis protein.

PT	Polynucleotide sequences encoding human secretory proteins useful for	
PT	gene therapy of e.g. genetic deficiency disorders, cancers, and	
PT	diseases caused by intracellular parasites -	
XX	Claim 29; Page 463-464; 585pp; English.	
CC	The invention comprises the amino acid and coding sequences of human	
CC	secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are	
CC	useful for treating a disease or condition associated with the expression	
CC	of functional SPTM. The SPTM DNA sequences are useful for somatic or	
CC	germline gene therapy to correct a genetic deficiency (e.g. severe	
CC	combined immunodeficiency). The SPTM DNA sequences are also useful in	
CC	providing protection against intracellular parasites (e.g. fungal	
CC	parasites and protozoan parasites). The SPTM DNA and protein sequences	
CC	are also useful for diagnosing cell proliferative disorders, cancer,	
CC	immune disorders (e.g. AIDS), neurological disorders (e.g. Parkinson's	
CC	disease), motor neuron disorders, demyelinating diseases (e.g. multiple	
CC	sclerosis), meningitis, abscesses, prion diseases, cerebral palsy,	
CC	neuroskelelral disorders, peripheral nervous system disorders,	
CC	dermatomycosits and polymyositis, myopathy, myasthenia gravis, and mental	
CC	disorders (e.g. Tourette's syndrome). Amino acid sequences ABB97749 -	
CC	ABB97933 represent human secretory proteins of the invention.

XX DNA construct for producing enzymatically-inactive proteolytic  
PT trypsin, comprises DNA sequence encoding proteolytic trypsin having  
PT an active site mutation -

XX Claim 40; Page 125-126; 16pp; English.

XX The present invention relates to recombinant human proteolytic  
CC trypsinases, active site mutants of these trypsinases and the methods for  
CC producing these. The method involves the production of a DNA expression  
CC construct comprising a promoter operably linked to a secretion signal  
CC sequence which is operably linked to a DNA sequence encoding a  
CC proteolytic trypsinase with an active site mutation (the construct drives  
CC expression of a mature proteolytic trypsinase that lacks enzymatic activity  
CC due to the active site mutation, in hosts transformed to contain the  
CC construct). The method is useful for producing enzymatically-active  
CC beta-II trypsinase. The active site mutants of proteolytic trypsinase provide  
CC a tool to investigate the structural and functional properties of the  
CC trypsinase and its enzymatic activity, and for modelling studies. The  
CC enzymatically-active, recombinant proteolytic trypsinase produced are  
CC useful as an antigen to generate anti-human trypsinase antibodies  
CC and in drug screening for compounds which act as trypsinase inhibitors,  
CC antagonists, agonists, etc. AAU12009-AAU12024 represent recombinant  
CC human beta-II trypsinase active site mutants.

 XX  
 CC This is the deduced amino acid sequence of human mast cell tryptase  
 CC I (see also AAV44329). The invention provides: compositions  
 CC comprising an isolated tryptase-7 that may include chimeric proteins  
 CC that contain (a) a human tryptase for all but the active site region  
 CC and (b) the substrate-binding pocket of mouse tryptase-7 or its  
 CC homologues (see AAM64233-39); a method for treating a blood clot by  
 CC administering a nucleic acid molecule that codes for a tryptase-7,  
 CC or an expression product, to decrease fibrinogen activity; a nucleic  
 CC acid encoding a serine protease (SP); and a method of producing a

CC mature SP by expressing the inactive zymogen in a host cell, and  
 CC cleaving the enterokinase susceptibility domain. The tryptase-7  
 CC polypeptides can be used to treat disorders mediated by undesirable  
 CC thrombus clot formation such as myocardial infarction and  
 CC reocclusion following angioplasty of blood clots associated with  
 CC pulmonary thromboembolism, deep vein thrombosis, cerebral embolism,  
 CC renal vein and peripheral arterial thrombosis. They are also  
 CC useful for all surgical procedures that require decreased blood  
 CC clots.

Novel human proteases and polynucleotides encoding the proteases,  
PT useful for treating, diagnosing or preventing cell proliferative,  
PT cardiovascular, autoimmune/inflammatory, neurological and developmental  
PT disorders -

Claim 1; Page 136-137; 151pp; English.

The invention relates to human proteases (PRTS-14) and its corresponding  
CC cDNA molecules. Human PRTS and its nucleic acid molecule are useful for  
CC the diagnosis, treatment and prevention of disorders associated with  
CC increased or decreased expression of PRTS. Examples of such disorders  
CC include, cell proliferative disorders (arteriosclerosis, atherosclerosis,  
CC hepatitis, psoriasis and cancers); autoimmune/inflammatory disorders  
CC (AIDS, Addison's disease, allergy, anaemia, asthma, atopic dermatitis,  
CC diabetes mellitus, glomerulonephritis, multiple sclerosis, osteoporosis,  
CC trauma, Grave's disease, rheumatoid arthritis, ulcerative colitis, and  
CC viral, bacterial, fungal, parasitic, protozoal and helminthic  
CC infections); cardiovascular disorders (myocardial infarction, ischaemic  
CC heart disease and hypertension); neurological disorders (epilepsy,  
CC Alzheimer's disease, Pick's disease, Huntington's disease, dementia,  
CC Parkinson's disease, stroke, mental disorders including mood, anxiety  
CC and seasonal affective disorder and prion diseases); gastrointestinal  
CC disorders (Crohn's disease, anorexia, nausea, diarrhoea and jaundice);  
CC epithelial disorders (contact dermatitis, eczema, acne vulgaris,  
CC alopecia, scabies, insect bites and urticaria); reproductive disorder  
CC (infertility, disruption of estrous and menstrual cycle and  
CC gynaecomastia); and developmental disorders (renal tubular acidosis,  
CC Cushing's syndrome, seizure disorders, congenital glaucoma and cataract).  
CC PRTS DNA is also in useful in gene therapy. PRTS and its immunogenic  
CC fragments are useful for screening libraries of compounds in several drug  
CC screening assays. The present sequence is human protease PRTS-13 protein.

XX PT associated disease conditions e.g. colorectal, breast cancer, cystic  
XX PT fibrosis and inflammatory bowel disease -  
XX  
XX Claim 10; Page 83-88; 103pp; English.  
XX  
XX The invention provides mucin genes (MUC11 and MUC12) located on human  
XX chromosome 7q22. The mucin genes or its portion is used in detecting  
XX CC polymorphism, mutation, deletion, truncation and expansion in the gene  
XX or its gene transcript. Pharmaceutical compositions and gene therapy  
XX constructs comprising the mucin genes are used for treating disease  
XX conditions associated with aberrant Mucin expression, altered properties  
XX of mucus or epithelial inflammatory processes involving Mucins like  
XX CC Crohn's disease, ulcerative colitis, asthma, chronic bronchitis and  
XX CC colorectal cancer, cystic fibrosis, inflammatory bowel disease and breast  
XX CC cancer. The mucin genes and the polypeptides are used for determining  
XX these diseases or their predisposition. The MUC11 and MUC12 polypeptides  
XX are used for preparing antagonist and antibodies. The present sequence  
XX represents the human MUC11 polypeptide.

 CC This is the deduced amino acid sequence of human mast cell tryptase  
 CC alpha (see also AAW44328). The invention provides: compositions  
 CC comprising an isolated tryptase-7 that may include chimeric proteins  
 CC that contain (a) a human tryptase-7 for all but the active site region  
 CC and (b) the substrate-binding pocket of mouse tryptase-7 or its  
 CC homologues (see AAW64233-39); a method for treating a blood clot by  
 CC administering a nucleic acid molecule that codes for a tryptase-7;  
 CC or an expression product, to decrease fibrinogen activity; a nucleic  
 CC acid encoding a serine protease (SP); and a method of producing a  
 CC mature SP by expressing the inactive zymogen in a host cell, and  
 CC cleaving the enterokinase susceptibility domain. The tryptase-7

CC polypeptides can be used to treat disorders mediated by undesirable  
 CC thrombus clot formation such as myocardial infarction and  
 CC reocclusion following angioplasty of blood clots associated with  
 CC pulmonary thromboembolism, deep vein thrombosis, cerebral embolism,  
 CC renal vein and peripheral arterial thrombosis. They are also  
 CC useful for all surgical procedures that require decreased blood  
 CC clots.

 XX  
 CC This invention describes novel bifunctional human tryptase (HTA)  
 CC inhibitors (I) of formula K1-L-K2 and their N-oxides (if a heteroaryl,  
 CC heterocycloalkyl or heterocycloalkylene group is present)  
 CC and salts where K1, K2 = head groups, each including a group Q which  
 CC can interact with carboxylate, U = linker of formula -A5-B5-A3-B3-A1-B1-  
 CC M-B2-A2-B4-A4-B6-A6-, which can adopt a conformation such that the K  
 CC groups are 20-45 Angstrom apart and permits (I) to penetrate into a  
 CC volume of 52 x 32 x 40 Angstrom, A1, A2 = CO, NH, O, S, SO2, SO2NH,  
 CC NH-SO2, CONH, NHC(O, COO or direct bond, A3, A4 = CO, CS, S, S, NH,  
 CC OCO, COO, CONH, NHC(O, COO or direct bond, -M-Ra, W = CO or bond, Ra =  
 CC cyclohexylene, phenylene, oxazolidine-2,3-, 3,4- or 3,5-diyl,  
 CC pyrrolidine-1,2- or 1,3-diyl, piperazine-1,4-diyl, morpholine-2,4- or  
 CC 3,4-diyl, thiomorpholine-2,4- or 3,4-diyl or piperidine-1,2-, 1,3- or  
 CC 1,4-diyl, A5, A6 = CO, NH, O, S, CONH, NHC(O, COO or direct bond,  
 CC M = -Ar-; -Ar-CR1R2-Ar-; -Ar-G-Ar-, (cyclohexylene)-E-  
 CC (cyclohexylene) - (where each ring is optionally substituted by 1-3 A');  
 CC 2,5-dioxopiperazine-3,6-diyl; pyridinediyl substituted by R5-R7;  
 CC -(CH2)2CONHCH(COR8)(CH2)4-; 5-8C cycloalkylene (optionally substituted  
 CC by 1-3 A'); or a tricyclic group of formula (i)-(iv) (where each benzo  
 CC ring of (i) and (ii) is optionally substituted by 1-3 A'), Ar =  
 CC phenylene (optionally substituted by 1-3 A'), R1, R2 = H, A' (optionally  
 CC partially or completely substituted by F) or OH, or CR1R2 = 5- or  
 CC 6-membered, optionally substituted cyclic hydrocarbyl; E, T = CH2, O or  
 CC bond; G = O, S or SO2; R5, R6 = H or A'; R7 = H, A', Ph or pyridyl; R8 =  
 CC OA', NH2, NHA', N(A')2, piperidino or morpholino; K1 = -B7(CO)m-B9-X1,  
 CC -B7(CO)m-B9-Y1 or -B7(CO)m-B9-B11-X1; K2 = -B8(CO)p-B10-X2,  
 CC -B8(CO)p-B10-Y2 or -B8(CO)p-B10-B12-X2; B1-B6 = bond or 1-4C alkylene;  
 CC B7-B12 = bond or 1-3C alkylene; m, p = 0 or 1, X1, X2 = NH2,  
 CC -C(NH)-NHRb, guanidino, -O-N=C(NH2)2, -S-C(NH)-NH2, -C(=NH)-SA',  
 CC -NH-C(NH)-C(NH)-NH2 or -C(=N-NH2)-NH2; Rb = H, OH or A';  
 CC A' = 1-4C alkyl; Y1, Y2 = 4-11C heteroaryl or 2-7C heterocycloalkyl,  
 CC containing at least one ring N which can function as proton acceptor  
 CC or donor; Z1, Z2 = 5-12C arylene, 5-12C heteroarylene, 3-8C cycloalkylene  
 CC or 3-8C heterocycloalkylene; arylene, heteroarylene, cycloalkylene,  
 CC 1-heterocycloalkylene, heteroaryl or heterocycloalkyl moieties are  
 CC optionally substituted by 1-3 of OH, halo, NO2, CN, NH2, A', OA', COOA',  
 CC COOA', COOH or CONH2. The products of the invention have antiallergic,  
 CC

CC antiinflammatory, antiasthmatic and antiarthritis activity. HTA is an  
 CC inflammatory mediator released from mast cells. (I) are used for the  
 CC treatment and diagnosis of allergic and/or inflammatory disorders  
 CC associated with tryptase release, e.g. allergic bronchitis,  
 CC conjunctivitis or rhinitis, bronchial asthma, autoimmune diseases such  
 CC as arthritis, multiple sclerosis, dermatitis and psoriasis and  
 CC inflammatory bowel disease. This sequence represents a human lung mast  
 CC cell beta-tryptase which is used to describe the method of the invention.

 PT DNA construct for producing enzymatically-inactive proteolytic  
 PT trypsinase, comprises DNA sequence encoding proteolytic trypsin having  
 PT an active site mutation -  
 XX  
 PS Claim 61; Page 80; 126pp; English.  
 CC The present invention relates to recombinant human proteolytic  
 CC trypsinases, active site mutants of these trypsinases and the methods for  
 CC producing these. The method involves the production of a DNA expression  
 CC construct comprising a promoter operably linked to a secretion signal  
 CC sequence which is operably linked to a DNA sequence encoding a  
 CC proteolytic trypsinase with an active site mutation (the construct drives  
 CC expression of a mature proteolytic trypsinase that lacks enzymatic activity  
 CC due to the active site mutation). In hosts transformed to contain the  
 CC construct(s), the method is useful for producing enzymatically-active  
 CC beta-II trypsinase. The active site mutants of proteolytic trypsinase provide  
 CC a tool to investigate the structural and functional properties of the  
 CC process and its enzymatic activity, and for modelling studies. The  
 CC enzymatically-active, recombinant proteolytic trypsinase produced are  
 CC useful as an antigen to generate anti-human trypsin antibodies  
 CC and in drug screening for compounds which act as trypsin inhibitors,  
 CC antagonists, agonists, etc. The present sequence represents recombinant  
 CC human mature beta-II trypsinase.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#### SUMMARIES

PT	New vaccine for treatment of Schistosoma infections contains a				
PT	recombinant fusion protein comprising cercarial elastase sequence fused				
PT	to bacterial, phage or viral protein -				
XX					
PS	Claim 5; Page 16; 26pp; English.				
XX					
CC	The invention provides a vaccine comprising a recombinant fusion protein				
CC	capable of eliciting immunity against Schistosoma parasites. The fusion				
CC	protein comprises the 27 or 28 kDa cercarial elastase sequence of				
CC	S. mansoni or an active fragment, homologue or variant, fused to a				
CC	bacterial, phage or viral protein. The vaccine containing the fusion				
CC	protein has been found to induce a significantly increased antibody				
CC	response against schistosoma infections, compared to the use of S.				
CC	mansoni cercarial elastase in its native form. The present sequence				
CC	represents the S. mansoni cercarial elastase protein fragment encoded by				
CC	exon 1 of the cercarial elastase gene, used in the fusion protein of the				
CC	invention.

PT	New vaccine for treatment of Schistosoma infections contains a				
PT	recombinant fusion protein comprising cercarial elastase sequence fused				
PT	to bacterial, phage or viral protein -				
XX					
PS	Claim 3; Page 17; 26pp; English.				
XX					
CC	The invention provides a vaccine comprising a recombinant fusion protein				
CC	capable of eliciting immunity against Schistosoma parasites. The fusion				
CC	protein comprises the 27 or 28 kDa cercarial elastase sequence of				
CC	S. mansoni or an active fragment, homologue or variant, fused to a				
CC	bacterial, phage or viral protein. The vaccine containing the fusion				
CC	protein has been found to induce a significantly increased antibody				
CC	response against schistosoma infections, compared to the use of S.				
CC	mansoni cercarial elastase in its native form. The present sequence				
CC	represents the S. mansoni cercarial elastase protein fragment encoded by				
CC	exon 1 of the cercarial elastase gene, used in the fusion protein of the				
CC	invention.				

protein has been found to induce a significantly increased antibody response against schistosoma infections, compared to the use of S. mansoni cercarial elastase in its native form. The present sequence represents the S. mansoni cercarial elastase protein fragment encoded by exon 2 of the cercarial elastase gene, used in the fusion protein of the invention.

XX Identifying signal oligopeptide(s) in protein sequence(s) - shown as  
XX regions of max. hydrophilicity, used in modulating communication  
XX between protein(s)

PS Claim 5; Page 70; 88pp; English.

XX The sequences given in AAW21201-560 represent hydrophilic signal oligo-  
XX peptides. These signal oligopeptides are localised on the surface  
XX of the protein and are represented by the hydrophilicity maxima of  
XX the protein. These peptides are enriched in charged amino acids  
XX arranged with neutral spacer amino acids. The specific signal  
XX character of these oligopeptides is determined by a characteristic  
XX combination of conformation and charge within the signal sequence.  
XX These oligopeptides may be used as vaccines in the treatment of  
XX human disease, as competitive inhibitors to prevent or reduce the  
XX metabolic action or interaction of a selected protein by blocking  
XX its specific signal sequences, or as therapeutic agents to function

as feedback regulators to reduce synthesis rate of a selected protein.  
XX These peptides may be modified by omitting one or more amino acids at  
XX the N- and/or C-terminal, by substituting one or more amino acids  
XX without consideration of charge and polarity, by substituting one or  
XX more amino acids with amino acid residues with similar charge and/or  
XX polarity, by omitting one or more amino acids or a combination of these.

PT	Spatially-addressable set of single exon nucleic acid probes, used to		
XX	measure gene expression in human lung samples -		
PS	Claim 27; SEQ ID No 30317; 634pp; English.		
XX			
CC	The invention relates to a spatially-addressable set of single exon		
CC	nucleic acid probes for measuring gene expression in a sample derived		
CC	from human lung comprising single exon nucleic acid probes having one of		
CC	12614 nucleic acid sequences mentioned in the specification, or their		
CC	complements or the 12387 open reading frames derived from the 12614		
CC	probes. Also included are a microarray comprising the novel set of		
CC	probes; the novel set of probes which hybridise at high stringency to a		
CC	nucleic acid expressed in the human lung; measuring gene expression in a		
CC	sample derived from human lung, comprising (a) contacting the array with		
CC	a collection of detectably labeled nucleic acids derived from human lung		
CC	mRNA, and (b) measuring the label detectably bound to each probe of		
CC	the array; identifying exons in a eukaryotic genome, comprising		
CC	(a) algorithmically predicting at least one exon from genomic sequences		
CC	of the eukaryote; and (b) detecting specific hybridisation of detectably		
CC	labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,		
CC	having a fragment identical to the predicted exon, the probe is included		
CC	in the above mentioned microarray; assigning exons to a single gene,		
CC	comprising (a) identifying exons from genomic sequence by the method		
CC	above and (b) measuring the expression of each of the exons in several		
CC	tissues and/or cell types using hybridisation to a single exon		
CC	microarrays having a probe with the exon, where a common pattern of		

CC	expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, Cc Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary haemangioendothelioma, pulmonary histiocytosis, lymphangioleiomyomatosis, Cc pulmonary alveolar proteinosis, Karsenger syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.
CC	Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pcf_sequences.

PT	Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris -
XX	
XX	Example 1; SEQ ID No 3812; 1069pp; English.
CC	Sequences AAU9105-AAU68017 represent Propionibacterium acnes immunogenic

CC polypeptides. The proteins and their associated DNA sequences are used in  
CC the treatment, prevention and diagnosis of medical conditions caused by  
CC *P. acnes*. The disorders include SAPHO syndrome (synovitis, acne,  
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis,  
CC *P. acnes* is also involved in infections of bone, joints and the central  
CC nervous system, however it is particularly involved in the inflammatory  
CC lesions associated with acne vulgaris. A method for detecting the  
CC presence or absence of *P. acnes* in a patient comprises contacting a  
CC sample with a binding agent that binds to the proteins of the invention  
CC and determining the amount of bound protein in the sample. The  
CC polypeptides may be used as antigens in the production of antibodies  
CC specific for *P. acnes* proteins. These antibodies can be used to  
CC downregulate expression and activity of *P. acnes* polypeptides and  
CC therefore treat *P. acnes* infections. The antibodies may also be used as  
CC diagnostic agents for determining *P. acnes* presence, for example, by  
CC enzyme linked immunosorbent assay (ELISA).  
CC Note: The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

 CC The sequence represents the amino acid sequence of the propeptide of  
 CC gamma carboxyglutamate-containing conopeptide Lv1. The conopeptide  
 CC is used for treating or preventing disorders in which the pathophysiology  
 CC involves excess excitation of nerve cells by excitatory amino acids or  
 CC agonists of heterogeneous ionotropic glutamate receptors or heterogeneous  
 CC G protein coupled glutamate receptors. The disorders may be neurological  
 CC disorders, such as: (i) seizure associated with epilepsy; (ii) a  
 CC neurotoxic injury associated with hypoxia, anoxia, ischaemia, stroke,  
 CC cerebrovascular accident, brain or spinal cord trauma, myocardial  
 CC infarct, physical trauma, drownings, suffocation, perinatal asphyxia, or  
 CC hypoglycaemic events; (iii) neurodegeneration associated with Alzheimer's  
 CC disease, Huntington's disease, senile dementia, Amyotrophic Lateral  
 CC Sclerosis, multiple sclerosis, Parkinson's disease, Down's Syndrome,  
 CC Korsakoff's disease, schizophrenia, AIDS (acquired immunodeficiency  
 CC syndrome) dementia from HIV infection, HIV infection, multi-infarct  
 CC dementia, Binswanger dementia and neuronal damage associated with  
 CC uncontrolled seizures; (iv) pain which is a migraine, acute pain, or  
 CC persistent pain; (v) chemical toxicity which is addiction, morphine,  
 CC opiate, opioid and barbiturate tolerance; and (vi) dystonia, urinary  
 CC incontinence, muscle relaxation or sleep disorder. The disorders may be  
 CC psychiatric disorders, such as, anxiety, major depression, manic-  
 CC depressive illness, obsessive-compulsive disorder, schizophrenia, or mood  
 CC disorders (bipolar disorder, unipolar depression, dysphymia, or seasonal  
 CC effective disorder). The conopeptide is also used to treat memory or  
 CC cognitive deficits, ophthalmic indications, or to control nematodes or  
 CC parasitic worms.

PT Propionibacterium acnes polypeptides and nucleic acids useful for
PT vaccinating against and diagnosing infections, especially useful for
PT treating acne vulgaris -
XX
PS Example 1; SEQ ID NO 11427; 10699P; English.
XX
CC Sequences AAU93105-AAU68017 represent Propionibacterium acnes immunogenic
CC polypeptides. The proteins and their associated DNA sequences are used in
CC the treatment, prevention and diagnosis of medical conditions caused by
CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
CC P. acnes is also involved in infections of bone, joints and the central
CC nervous system, however it is particularly involved in the inflammatory
CC lesions associated with acne vulgaris. A method for detecting the
CC presence or absence of P. acnes in a patient comprises contacting a
CC sample with a binding agent that binds to the proteins of the invention
CC and determining the amount of bound protein in the sample. The
CC polypeptides may be used as antigens in the production of antibodies
CC specific for P. acnes proteins. These antibodies can be used to
CC downregulate expression and activity of P. acnes polypeptides and
CC therefore treat P. acnes infections. The antibodies may also be used as
CC diagnostic agents for determining P. acnes presence, for example, by
CC enzyme linked immunosorbent assay (ELISA).
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

PT Novel method for the preparation of an exotic polypeptide by
PT transforming a plant to express and secrete the peptide -
XX
PS Example 2; Page 20-21; 33pp; Japanese.
XX
CC The invention relates to the recombinant expression of a foreign protein
CC in a transgenic plant whereby the foreign protein is secreted into the
CC intercellular fluid. The invention provides the cucumber xylem sap
CC protein XSP30 and XSP4 promoters (AAC63913, AAC63914) and a cucumber
CC XSP30 secretion signal peptide (AAB29466) for expression of the foreign
CC protein according to the method of the invention. The invention also
CC relates to expression constructs comprising a promoter of the invention
CC and DNA encoding the signal peptide, and transgenic plants and plant
CC cells comprising the expression vector. The method of the invention is
CC useful for the efficient production of a foreign protein in a plant, and
CC enables the recombinantly produced protein to be easily collected. The
CC present sequence represents cucumber XSP4.

PT Screening a mutant library for mutants unable to grow under specific
PT conditions and for identifying loci involved in pathogenicity,
FT comprised using signature tagged transposon mutagenesis
XX
XX
PS Example 8; Fig 16A; 159pp; English.
XX
XX The present sequence is given in a specification relating to a method for
CC screening a library of mutants. The method comprises constructing a
CC library with insertions in genes and/or regulatory regions of the
CC organisms of interest, where the insertion contains a tag and/or a
CC transposon associated with a tag. The mutants are identified by
CC hybridisation of the tags to known sequences. The method is useful for
CC treating an individual suffering from a mycobacterial infection,
CC suspected of being infected with a Mycobacterium, or having been
CC exposed to an infectious Mycobacterium. It is also useful for
CC identifying and isolating mutants of actinomycetales and for identifying
CC compounds that have antibiotic activity. The method is used to identify
CC mutants of microorganisms, preferably an actinomycetales, such as
CC M. tuberculosis, M. bovis, M. leprae, M. avium, M. intracellulare and
CC M. paratuberculosis, that is unable to grow under specific conditions.
CC It is especially useful for identifying loci involved in pathogenicity.
CC It is useful in constructing vaccines. The method can be used to screen
CC multiple libraries concurrently. It can screen libraries of different
CC organisms or different strains of the same organism. The present
CC protein is encoded by a gene which is disrupted by the insertion of
CC the IS 1096 transposon to produce an attenuated mutant of Mycobacterium
CC tuberculosis.

XX  
XX The invention relates to human endoprotease 11 (AA66791), nucleic acids  
CC encoding it (AAH76947), and a method for the recombinant production of  
CC endoprotease 11. The protein has a molecular weight of 11 kD. The present  
CC invention additionally discloses an antagonist of endoprotease 11  
CC for therapeutic use, and an antibody which specifically binds to  
CC endoprotease 11. Endoprotease 11, and nucleotides which encode it may  
CC be used for treating a variety of diseases, such as malignant tumours,  
CC blood diseases, HIV (human immunodeficiency virus) infection, immune  
CC disorders and inflammatory conditions. The protein may also be used to  
CC screen for modulators of its activity or for peptide fingerprinting

CC identification. The polynucleotide can be used as a primer for nucleic  
CC acid amplification reactions or as a probe for hybridisation reactions,  
CC or in producing gene chips or microarrays. The present sequence  
CC represents the 15 N-terminal amino acids of human endoprotease 11 used in  
CC ELISA (enzyme linked immunosorbent assay) in an exemplification of the  
CC invention.

XX  
XX The sequences given in AAR57837-84 are binding sites which were used in  
CC the method of the invention for producing a polypeptide having a  
CC binding site capable of binding a preselected agent. Nucleotide  
CC sequences encoding these binding site peptides were introduced into  
CC a CDR region of a nucleic acid encoding an immunoglobulin heavy (H)  
CC or light (L) chain, by amplifying the CDR region by primer extension.  
CC Preferred binding sites are derived from the RGD-dependant integrin

CC ligands, eg. fibronectin, vitronectin, von Willebrand factor, from  
CC the envelope glycoprotein from viruses such as HIV gp120, EBV gp350/  
CC 220, reovirus haemagglutinin, from cellular receptors such as CR2 or  
CC CD4, from protein hormones such as thyroid stimulating hormone (TSH),  
CC insulin, transferrin, from apolipoproteins such as apo E and apo A1,  
CC from immunoglobulin GDRs and from MHC class I or II proteins. Non-RGD-  
CC dependent integrin binding sites were selected for the affinity to bind  
CC vitronectin receptor alpha-v, beta-3. An anti-gp11b/IIa monoclonal  
CC antibody (Mab) produced in this way can be used to modulate platelet  
CC adhesion in the treatment of coagulation and some inflammatory  
CC responses. An anti-vitronectin Mab can be used in the treatment of cancer  
CC by blocking tumour cell adhesion and migration. This sequence  
CC represents an RGD-dependant binding site which has been shown to bind the  
CC human platelet glycoprotein gp11b/IIa (alpha11b, beta3) when present in  
CC a phagemid display protein.

PT Isolated human poly(nucleotide(s) encoding secretory peptide(s) -  
PT used to develop products for the diagnosis and treatment of e.g.  
PT inflammation, cancers, CNS disorders or immune system disorders  
XX  
XX Disclosure; Page 20; 201pp; English.  
XX  
XX This sequence represents a fragment of a secreted human protein encoded  
CC by the nucleic acid molecule designated Gene 18 (AAV34303). The gene  
CC can be used to generate fusion proteins by linking to the gene to a  
CC human immunoglobulin Fc portion (e.g. AAV34277) for increasing the  
CC stability of the fused protein as compared to the human protein only.  
CC The invention relates to 28 novel genes and their fragments (nucleic  
CC acid sequences: AAV34286-V34325; amino acid sequences AAW75196-W75235)  
CC which are useful for preventing, treating or ameliorating medical  
CC conditions e.g. by protein or gene therapy. Also, pathological  
CC conditions can be diagnosed by determining the amount of the new  
CC polypeptides in a sample or by determining the presence of mutations in  
CC the new polynucleotides. Specific uses are described for each of the 28  
CC polynucleotides, based on which tissues they are most highly expressed in  
CC (see AAV34286 for described uses).

XX  
XX The present sequence represents a fragment specific to an isoform of  
CC the human ATP protein, designated hATP1P2. ATP has isoforms designated  
CC hATP1P2, hATP1P3, hATP1P4, hATP1P5 and hATP1P6. All ATP proteins comprise  
CC their C-terminals a common fragment which interacts with the angiotensin  
CC II (AT2) receptor. ATP proteins have antioncogenic functions. The human  
CC ATP gene has 17 exons, and is located at chromosome region 8p21.3-p22.

CC ATRP polynucleotides and polypeptides are used to detect, evaluate or  
 CC give prognosis for a cancer or pre-cancer condition, and as an  
 CC anti-tumour medicament.

CC The present sequence is that of an immunogenic polypeptide  
 CC comprising amino acids 332-371 of human prostate-specific PS118  
 CC polypeptide (see AAM50809). A PS118 consensus sequence (see  
 CC ABA51651) is found at least 12 times more often in prostate than  
 CC in non-prostate tissue. PS118 polypeptides, polynucleotides,  
 CC antibodies, agonists and inhibitors are useful for detecting,  
 CC diagnosing, staging, monitoring, prognosticating, preventing and  
 CC treating (including by genetic immunisation), or determining the  
 CC predisposition of an individual to, diseases and conditions of the  
 CC prostate, such as benign prostatic hyperplasia, prostatitis,

CC prostatic intraepithelial neoplasia, prostate cancer, tumours and  
 CC metastases. The PS118 polypeptides can be produced by expression  
 CC of PS118 polynucleotides in transfected host cells, and  
 CC immunogenic peptides are useful for raising PS118-specific  
 CC antibodies of diagnostic use. The methods and reagents of the  
 CC invention may provide an early means of detecting diseases of the  
 CC prostate and may also provide new markers which can differentiate  
 CC between the clinically important and unimportant prostate cancers  
 CC without the use of surgery.

XX Propionibacterium acnes polypeptides and nucleic acids useful for  
 PT vaccinating against and diagnosing infections, especially useful for  
 PT treating acne vulgaris -

XX Example 1; SEQ ID No 338; 1069pp; English.

XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic  
 CC polypeptides. The proteins and their associated DNA sequences are used in  
 CC the treatment, prevention and diagnosis of medical conditions caused by  
 CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,  
 CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.  
 CC P. acnes is also involved in infections of bone, joints and the central  
 CC nervous system, however it is particularly involved in the inflammatory  
 CC lesions associated with acne vulgaris. A method for detecting the  
 CC presence or absence of P. acnes in a patient comprises contacting a  
 CC sample with a binding agent that binds to the proteins of the invention  
 CC and determining the amount of bound protein in the sample. The

CC polypeptides may be used as antigens in the production of antibodies  
CC specific for *P. acnes* proteins. These antibodies can be used to  
CC downregulate expression and activity of *P. acnes* polypeptides and  
CC therefore treat *P. acnes* infections. The antibodies may also be used as  
CC diagnostic agents for determining *P. acnes* presence, for example, by  
CC enzyme linked immunosorbent assay (ELISA).  
CC Note: The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

XX Single exon nucleic acid probes for analyzing gene expression in human

XX hearts -

XX Claim 15; SEQ ID NO 29052; 530pp; English.

CC The present invention relates to single exon nucleic acid probes for  
CC measuring human gene expression in a sample derived from human heart (see  
CC ABA2155-ABA41305). The present sequence is a protein encoded by one such  
CC probe. The probes may be used for predicting, measuring and displaying  
CC gene expression in samples derived from the human heart via microarrays.  
CC By measuring gene expression, the probes are useful for predicting,  
CC diagnosing, grading, staging, monitoring and prognosing diseases of the  
CC human heart and vascular system e.g. cardiovascular disease,  
CC hypertension, cardiac arrhythmias and congenital heart disease.

PT Single exon nucleic acid probes for analyzing gene expression in human
PT hearts -
XX
PS Claim 15; SEQ ID NO 26823; 530bp; English.
XX
CC The present invention relates to single exon nucleic acid probes for
CC measuring human gene expression in a sample derived from human heart (see
CC ABA21535-BA41305). The present sequence is a protein encoded by one such
CC probe. The probes may be used for predicting, measuring and displaying
CC gene expression in samples derived from the human heart via microarrays.
CC By measuring gene expression, the probes are useful for predicting,
CC diagnosing, grading, staging, monitoring and prognosing diseases of the
CC human heart and vascular system e.g. cardiovascular disease,
CC hypertension, cardiac arrhythmias and congenital heart disease.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

 PT Spatially-addressable set of single exon nucleic acid probes, used to  
 measure gene expression in human lung samples -  
 XX  
 PS Claim 27; SEQ ID No 34096; 634pp; English.  
 XX  
 CC The invention relates to a spatially-addressable set of single exon  
 CC nucleic acid probes for measuring gene expression in a sample derived  
 CC from human lung comprising single exon nucleic acid probes having one of  
 CC 12614 nucleic acid sequences mentioned in the specification, or their  
 CC complements or the 12387 open reading frames derived from the 12614  
 CC probes. Also included are a microarray comprising the novel set of  
 CC probes; the novel set of probes which hybridize at high stringency to a  
 CC nucleic acid expressed in the human lung; measuring gene expression in a  
 CC sample derived from human lung, comprising (a) contacting the array with a  
 CC collection of detectably labeled nucleic acids derived from human lung  
 CC mRNA, and (b) measuring the label detectably bound to each probe of  
 CC the array; identifying exons in a eukaryotic genome, comprising  
 CC (a) algorithmically predicting at least one exon from genomic sequences  
 CC of the eukaryote; and (b) detecting specific hybridisation of detectably

CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,  
 CC having a fragment identical to the predicted exon, the probe is included  
 CC in the above mentioned microarray; assigning exons to a single gene,  
 CC comprising (a) identifying exons from genomic sequence by the method  
 CC above and (b) measuring the expression of each of the exons in several  
 CC tissues and/or cell types using hybridisation to a single exon  
 CC microarray having a probe with the exon, where a common pattern of  
 CC expression of the exons in the tissues and/or cell types indicates that  
 CC the exons should be assigned to a single gene; a peptide comprising one  
 CC of 12011 sequences, mentioned in the specification, or encoded by the  
 CC probes/open reading frames (ORF). The probes are used for gene  
 CC expression analysis, and for identifying exons in a gene, particularly  
 CC using human lung derived mRNA and for the study of lung diseases  
 CC such as asthma, lung cancer, chronic obstructive pulmonary disease  
 CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary  
 CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,  
 CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary  
 CC haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis,  
 CC pulmonary alveolar proteinosis, Kargener syndrome, fibrocystic  
 CC pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension  
 CC and hyaline membrane disease. The present sequence is a peptide/protein  
 CC encoded by a single exon probe of the invention.  
 CC Note: The sequence data for this patent did not form part  
 CC of the printed specification, but was obtained in electronic  
 CC format directly from WIPO at

 PT transplantation -  
 PS  
 XX Claim 10; Page 1105; 2508bp; English.  
 PS  
 CC Sequences ABP31028-ABP35561 represent 4534 novel human proteins  
 CC designated ORF (open reading frame) 1-4534, and sequences ABN75054-  
 CC ABN79587 represent cDNAs encoding them. The invention also encompasses  
 CC polypeptides at least 80% identical to the ORF1-ORF4534 (collectively  
 CC referred to as ORFX) proteins, polynucleotides at least 85% identical to  
 CC the ORFX nucleic acid sequences, vectors and host cells comprising ORFX  
 CC polynucleotides, the recombinant production of ORFX proteins, antibodies  
 CC specific for ORFX proteins, methods of detecting ORFX polynucleotides and  
 CC polypeptides, methods of screening for modulators of ORFX expression or  
 CC activity, and methods of screening individuals for a predisposition to an  
 CC ORFX-associated disorder. The ORFX proteins of the invention have a wide  
 CC range of biological activities, such as cytokine, cell proliferation,  
 CC cell differentiation, immune modulation, haematopoiesis regulation,  
 CC tissue growth, angiogenesis, activin or inhibin activity, chemotactic/  
 CC chemokinetic activity, haemostatic activity, thrombolytic activity,  
 CC receptor/ligand, antiinflammatory activity, tumour inhibition activity,  
 CC and antiinfective activity, and may also be involved in the determination  
 CC of bodily characteristics, fertility and behaviour. ORFX proteins,  
 CC nucleic acids and antibodies may be used in the treatment of cancers,  
 CC other proliferative disorders such as psoriasis and benign tumours,  
 CC neurological disorders such as epilepsy and Alzheimer's disease,  
 CC cardiovascular diseases, immune system disorders, disorders related to  
 CC organ transplantation, disorders of tissue growth and regeneration,  
 CC diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester  
 CC storage disease, and infectious diseases caused by viral, bacterial,  
 CC fungal and other pathogens. ORFX nucleic acids may also be used as a  
 CC source of primers and probes, in the detection of ORFX genomic sequences  
 CC or transcripts, in the identification and cloning of homologous  
 CC sequences, in genetic diagnosis, and in forensic biology. The ORFX  
 CC nucleic acids may additionally be used to produce transgenic animals  
 CC which may be useful for studying the function and/or activity of ORFX  
 CC protein, and in drug screening. The ORFX proteins may also be used as  
 CC immunogens to generate specific antibodies, which are useful in the  
 CC diagnosis, treatment and monitoring of ORFX-associated diseases.

 XX  
 CC Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic  
 CC polypeptides. The proteins and their associated DNA sequences are used in  
 CC the treatment, prevention and diagnosis of medical conditions caused by  
 CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,  
 CC pustulosis, hyperostosis and osteomyelitis), uveitis and endophthalmitis.  
 CC P. acnes is also involved in infections of bone, joints and the central  
 CC nervous system, however it is particularly involved in the inflammatory  
 CC lesions associated with acne vulgaris. A method for detecting the  
 CC presence or absence of P. acnes in a patient comprises contacting a  
 CC sample with a binding agent that binds to the proteins of the invention  
 CC and determining the amount of bound protein in the sample. The  
 CC polypeptides may be used as antigens in the production of antibodies  
 CC specific for P. acnes proteins. These antibodies can be used to  
 CC downregulate expression and activity of P. acnes polypeptides and  
 CC therefore treat P. acnes infections. The antibodies may also be used as  
 CC diagnostic agents for determining P. acnes presence, for example, by  
 CC enzyme linked immunosorbent assay (ELISA).  
 CC Note: The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences.

XX  
XX New isolated polynucleotide and encoded polypeptides, useful in  
PT diagnostics, forensics, gene mapping, identification of mutations  
PT responsible for genetic disorders or other traits and to assess  
PT biodiversity -  
XX  
PS Claim 20; SEQ ID No 56840; 103pp; English.  
XX  
XX The invention relates to isolated polynucleotide (I) and  
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,  
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome  
CC and gene mapping, and in recombinant production of (II). The  
CC polynucleotides are also used in diagnostics as expressed sequence tags  
CC for identifying expressed genes. (I) is useful in gene therapy techniques  
CC to restore normal activity of (II) or to treat disease states involving  
CC (II). (II) is useful for generating antibodies against it, detecting or  
CC quantitating a polypeptide in tissue, as molecular weight markers and as  
CC a food supplement. (II) and its binding partners are useful in medical  
CC imaging of sites expressing (II). (I) and (II) are useful for treating  
CC disorders involving aberrant protein expression or biological activity.  
CC The polypeptide and polynucleotide sequences have applications in  
CC diagnostics, forensics, gene mapping, identification of mutations  
CC responsible for genetic disorders or other traits to assess biodiversity  
CC and to produce other types of data and products dependent on DNA and  
CC amino acid sequences. ABG00010-ABG30377 represent novel human  
CC diagnostic amino acid sequences of the invention.  
CC Note: The sequence data for this patent did not appear in the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

XX Novel human polypeptides and polynucleotides useful for diagnosing,  
PT preventing and treating cardiovascular disease, neurodegenerative,  
PT hyperproliferative disorders and autoimmune disorders -  
XX  
PS Disclosure; SEQ ID 11312; 1037pp; English.  
XX  
XX The present invention describes substantially purified human proteins  
CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1  
CC in the specification). ABN15762 to ABN27252 encode the human ORFX  
CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for  
CC treating or preventing a pathology associated with an ORFX-associated  
CC disorder in humans, and in the manufacture of a medicament for treating a  
CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide  
CC sequences can be used in gene therapy. ORFX sequences can be used in the  
CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,  
CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,  
CC osteoarthritis, neurodegenerative disorders, disorders related to organ  
CC transplantation, cardiovascular diseases, diabetes mellitus, systemic  
CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester  
CC storage disease, various immune deficiencies and disorders, infectious  
CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid  
CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host  
CC disease and autoimmune inflammatory eye disease. ORFX proteins are also  
CC useful for treating burns, incisions, ulcers, for treating osteoporosis,  
CC bone degenerative disorders, or periodontal disease, and for gut,  
CC protection or regeneration and treatment of lung or liver fibrosis,  
CC reperfusion injury in various tissues and conditions resulting from  
CC systemic cytokine damage.  
CC N.B. The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

CC -I- FUNCTION: NECESSARY FOR EFFICIENT EXPORT OF EXTRA-CYTOPLASMIC

CC PROTEINS. BINDS TO THE SIGNAL SEQUENCE WHEN IT EMERGES FROM THE  
CC RIBOSOMES (BY SIMILARITY).  
CC -I- SUBUNIT: SIGNAL RECOGNITION PARTICLE CONSISTS OF A SMALL  
CC CYTOPLASMIC RNA (SC-RNA) MOLECULE AND PROTEIN F5F (BY SIMILARITY).  
CC -I- DOMAIN: THE PROTEIN HAS A TWO DOMAIN STRUCTURE: THE G-DOMAIN  
CC BINDS GTP; THE M-DOMAIN BINDS THE RNA AND ALSO BINDS THE SIGNAL  
CC SEQUENCE.  
CC -I- SIMILARITY: BELONGS TO THE SRP FAMILY OF GTP-BINDING PROTEINS.

AF510344 441 bp DNA linear INV 01-JUL-2002  
DEFINITION Schistosoma douthetti elastase 1b (CE-1b) gene, partial cde.  
ACCESSION AF510344  
VERSION AF510344.1 GI:21217540  
KEYWORDS  
SOURCE Schistosoma douthetti.  
ORGANISM Schistosoma douthetti  
Eukaryota; Metazoa; Platyhelminthes; Trematoda; Digenea; Strigeidae; Schistosomatidae; Schistosomatidae; Schistosoma.  
REFERENCE 1 (bases 1 to 441)  
AUTHORS Salter, J.P., Choe, Y., Albrecht, H., Franklin, C., Lim, K.-C.,

----- Project Information	
Center project name:	TURT
Center clone name:	CH230-2F11
----- Summary Statistics	
Sequencing vector:	Plasmid;
Chemistry:	Dye-terminator Big Dye; 100% of reads
Assembly program:	Phrap; version 0.990329
Consensus quality:	130648 bases at least Q40
Consensus quality:	139589 bases at least Q30
Consensus quality:	146680 bases at least Q20
-----	
* NOTE: Estimated insert size may differ from sequence length.	
* (see <a href="http://www.hsbc.bcm.tmc.edu/docs/genbank_draft_data.html">http://www.hsbc.bcm.tmc.edu/docs/genbank_draft_data.html</a> )	
* NOTE: This is a "working draft" sequence. It currently	
* consists of 80 contigs. The true order of the pieces	
* is not known and their order in this sequence record is	
* arbitrary. Gaps between the contigs are represented as	
* runs of N, but the exact sizes of the gaps are unknown.	
* This record will be updated with the finished sequence	
* as soon as it is available and the accession number will	
* be preserved.

\* NOTE: This is a 'working draft' sequence. It currently consists of 54 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as \* runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

1 1196: contig of 1196 bp in length  
\* 1197 1296: gap of unknown length  
\* 1297 1297: contig of 1250 bp in length  
\* 1297 2546: gap of unknown length  
\* 2547 2647: gap of 1296 bp in length  
\* 2647 3943: gap of unknown length  
\* 3943 4042: contig of 1302 bp in length  
\* 4042 4043: gap of unknown length  
\* 4043 5345: gap of 1247 bp in length  
\* 5345 5445: gap of unknown length  
\* 5445 6691: gap of 1216 bp in length  
\* 6691 6791: gap of unknown length  
\* 6791 8007: contig of 1471 bp in length  
\* 8007 8107: gap of unknown length  
\* 8107 8108: gap of 1176 bp in length  
\* 8108 9579: gap of unknown length  
\* 9579 9679: gap of unknown length  
\* 9679 10855: gap of 1511 bp in length  
\* 10855 10955: gap of unknown length  
\* 10955 12466: gap of 1749 bp in length  
\* 12466 12566: gap of unknown length  
\* 12566 14315: gap of 1054 bp in length  
\* 14315 14415: gap of unknown length  
\* 14415 14568: gap of unknown length  
\* 14568 15668: gap of 1614 bp in length  
\* 15668 15669: gap of unknown length  
\* 15669 17183: gap of 1345 bp in length  
\* 17183 17282: gap of unknown length  
\* 17282 18627: gap of unknown length  
\* 18627 18728: gap of 1063 bp in length  
\* 18728 19791: gap of unknown length  
\* 19791 19891: gap of 1365 bp in length  
\* 19891 21256: gap of unknown length  
\* 21256 21356: gap of 1373 bp in length  
\* 21356 22728: gap of unknown length  
\* 22728 24070: gap of 1242 bp in length  
\* 24070 24071: gap of unknown length  
\* 24071 24171: gap of 1062 bp in length  
\* 24171 25232: gap of unknown length  
\* 25232 25332: gap of 1267 bp in length  
\* 25332 26699: gap of unknown length  
\* 26699 26700: gap of 1603 bp in length  
\* 26700 28402: gap of unknown length  
\* 28402 28502: gap of 1997 bp in length  
\* 28502 30499: gap of unknown length  
\* 30499 30500: gap of 1726 bp in length  
\* 30500 32325: gap of unknown length  
\* 32325 32425: gap of 2208 bp in length  
\* 32425 34633: gap of unknown length  
\* 34633 34733: gap of unknown length  
\* 34733 36722: contig of 1989 bp in length  
\* 36722 36723: gap of unknown length  
\* 36723 38362: contig of 1540 bp in length  
\* 38362 38463: gap of unknown length  
\* 38463 40346: gap of 1884 bp in length  
\* 40346 40347: gap of unknown length  
\* 40347 42311: contig of 1664 bp in length  
\* 42311 42410: gap of unknown length  
\* 42410 44174: contig of 1764 bp in length  
\* 44174 44274: gap of unknown length  
\* 44274 46305: gap of 2031 bp in length  
\* 46305 46306: gap of unknown length  
\* 46306 47639: contig of 1234 bp in length  
\* 47639 47740: gap of unknown length  
\* 47740 49253: contig of 1414 bp in length  
\* 49253 51108: gap of unknown length  
\* 51108 51208: gap of 1855 bp in length  
\* 51208 53770: contig of 2562 bp in length

\* NOTE: Estimated insert size may differ from sequence length

 Center clone name: CH230-182P23  
 ----- Summary Statistics

Sequencing vector: Plasmid;  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990329  
 Consensus quality: 102338 bases at least Q40  
 Consensus quality: 108995 bases at least Q30  
 Consensus quality: 113860 bases at least Q20

-----  
 \* NOTE: Estimated insert size may differ from sequence length  
 \* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).  
 \* NOTE: This is a "working draft" sequence. It currently  
 \* consists of 80 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; information on the WORMPEP database can be found at [http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep) RP23-29H22 is from the RPCI-23 Mouse PAC Library

constructed by the group of Pieter de Jong.

 \* NOTE: Estimated insert size may differ from sequence length.  
 \* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 68 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

## JOURNAL

## COMMENT

Submitted (17-JUL-2002) Human Genome Sequencing Center, Department  
 of Molecular and Human Genetics, Baylor College of Medicine, One  
 Baylor Plaza, Houston, TX 77030, USA  
 On Jul 14, 2002 this sequence version replaced gi:19352257.

----- Genome Center  
 Center: Baylor College of Medicine

Center code: BCM  
 Web site: <http://www.hgsc.bcm.tmc.edu/>  
 Contact: [hgsc-help@bcm.tmc.edu](mailto:hgsc-help@bcm.tmc.edu)

----- Project Information  
 Center project name: GSYH  
 Center clone name: CH230-290G24

----- Summary Statistics  
 Sequencing vector: Plasmid;  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990329

Consensus quality: 138957 bases at least Q40  
 Consensus quality: 145134 bases at least Q30  
 Consensus quality: 150777 bases at least Q20

-----  
 \* NOTE: Estimated insert size may differ from sequence length  
 \* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 67 contigs. The true order of the pieces is  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
Project Information
Center project name: GPVW
Center clone name: CH230-96P15
----- Summary Statistics
Sequencing vector: Plasmid;
Chemistry: Dye-terminator Big Dye 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 116229 bases at least Q40
Consensus quality: 120977 bases at least Q30
Consensus quality: 125402 bases at least Q20
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html) .
* NOTE: This is a 'working draft' sequence. It currently
* consists of 61 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
1 1076: contig of 1076 bp in length
1077 1176: gap of unknown length
1177 1177: contig of 1129 bp in length
2306 2405: gap of unknown length
2406 3853: contig of 1448 bp in length
3854 3953: gap of unknown length
3954 5443: contig of 1490 bp in length
5444 5543: gap of unknown length
5544 7070: contig of 1527 bp in length
7071 7171: gap of unknown length
7171 8644: contig of 1474 bp in length
8645 8745: gap of unknown length
8745 10281: contig of 1536 bp in length
10281 10380: gap of unknown length
10381 11897: contig of 1517 bp in length
11898 11997: gap of unknown length
11998 13505: contig of 1508 bp in length
13506 13605: gap of unknown length
13606 15171: contig of 1566 bp in length
15172 15271: gap of unknown length
15272 16309: contig of 1038 bp in length
16310 16409: gap of unknown length
16410 17822: contig of 1413 bp in length

TITLE  
JOURNAL  
COMMENT

\* NOTE: This record contains 82 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

Center: Whitehead Institute/ MIT Center for Genome Research  
Center code: WIRB  
Web site: http://www-seq.wi.mit.edu  
Contact: sequence\_submissions@genome.wi.mit.edu  
Project Information  
Center project name: I15094  
Center clone name: 124.1.9  
Summary Statistics  
Sequencing vector: Plasmid; n/a; 100% of reads  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.960731

Consensus quality: 150640 bases at least Q40  
Consensus quality: 152759 bases at least Q30  
Consensus quality: 153421 bases at least Q20  
Insert size: 168000; agarose-fp  
Insert size: 154038; sum-of-contigs  
Quality coverage: 7.6 in Q20 bases; agarose-fp  
Quality coverage: 8.3 in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently  
consists of 23 contigs. Gaps between the contigs  
are represented as runs of N. The order of the pieces  
is believed to be correct as given, however the sizes  
of the gaps between them are based on estimates that have  
been provided by the submitter.

This sequence will be replaced  
by the finished sequence as soon as it is available and  
the accession number will be preserved.

1 9659: contig of 9659 bp in length

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank\_draft\_data.html)
* NOTE: This is a 'working draft' sequence. It currently
* consists of 68 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

XX New vaccine for treatment of Schistosoma infections contains a  
PT recombinant fusion protein comprising cercarial elastase sequence fused  
PT to bacterial, phage or viral protein -  
XX  
XX Claim 2, Fig 1; 26pp; English.  
XX  
XX The invention provides a vaccine comprising a recombinant fusion protein  
CC capable of eliciting immunity against Schistosoma parasites. The fusion  
CC protein comprises the 27 or 28 kDa cercarial elastase sequence of  
CC S. mansoni or an active fragment, homologue or variant, fused to a  
CC bacterial, phage or viral protein. The vaccine containing the fusion  
CC protein has been found to induce a significantly increased antibody  
CC response against schistosoma infections, compared to the use of S.  
CC mansoni cercarial elastase in its native form. The present sequence  
CC represents the S. mansoni cercarial elastase gene.

ID ABI32679 standard; DNA; 5474 BP.

[illegible]

XX The present invention provides a number of human immune system associated  
CC genes which are modified by the methylation of cytosines. The sequences  
CC can be used in the diagnosis and treatment of immune system disorders,  
CC including eye diseases such as retinopathy, neovascular glaucoma and  
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid  
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,  
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel  
CC diseases. The present sequence is a gene of the invention.

XX

PS Claim 1; SEQ ID NO 1515; 32pp + Sequence Listing; German.

XX The present invention provides a number of human immune system associated  
CC genes which are modified by the methylation of cytosines. The sequences  
CC can be used in the diagnosis and treatment of immune system disorders,  
CC including eye diseases such as retinopathy, neovascular glaucoma and  
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid  
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,  
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel  
CC diseases. The present sequence is a gene of the invention.

XX New nucleic acid sequences from chemically modified genes associated  
PT with DNA replication, useful for analysing cytosine methylations for  
PT diagnosis and therapy of diseases e.g. Ataxia telangiectasia -  
XX Claim 1; SEQ ID NO 72; 23pp + Sequence Listing; English.  
XX  
XX The invention relates to nucleic acid sequences comprising at least 18  
CC bases of a chemically pretreated gene associated with gene regulation,  
CC selected from 94 genes (ABL49301-ABL49394) and/or complementary sequences  
CC associated with DNA replication, CENPB, DNAL2, ATR, CHD1L, ERCC3, SNRPAL,  
CC RAD50 and LIG2. The chemical pretreatment converts cytosine bases  
CC unmethylated at the 5-position to uracil or another base with  
CC hybridisation behaviour dissimilar to cytosine, to enable analysis of  
CC cytosine methylations. The DNA sequences and method are useful in the  
CC diagnosis of diseases (or predisposition to diseases) associated with DNA  
CC replication and in therapy of such diseases, by enabling analysis of the  
CC cytosine methylation patterns of such genes. They are especially useful  
CC in diagnosis and therapy of e.g. Ataxia telangiectasia, ATR-X, Bloom's  
CC syndrome, solid tumours and cancer.  
CC Note: The sequence data for this patent did not form part of the printed  
CC specification and was supposed to be available directly from WIPO at  
CC ftp.wipo.int/pub/published\_pat\_sequences. However, the sequence data did  
CC not correspond to that referred to in the specification. The present data  
CC is taken from EPO data for the patent.

XX  
XX Nucleic acid, useful for diagnosis and therapy of diseases associated  
PT with cell signalling e.g. cancer, comprises chemically modified genomic  
PT sequences of genes associated with cell signalling -  
XX  
XX Claim 1; SEQ ID NO 75; 24p+sequence listing; English.  
PS  
XX  
XX The invention relates to a nucleic acid comprising a sequence of at least  
CC 18 bases of a segment of chemically pretreated DNA of genes associated  
CC with cell signalling. The activity of the modified sequences of the  
CC invention may be described as cytostatic. The object of the invention is  
CC to provide the chemically modified DNA of genes associated with cell  
CC signalling, as well as oligonucleotides and/or PNA-oligomers for  
CC detecting cytosine methylations, as well as a method which is  
CC particularly suitable for the diagnosis and/or therapy of genetic and  
CC epigenetic parameters of genes associated with cell signalling. The  
CC chemically modified DNA provided by the invention is useful for diagnosis  
CC and therapy of diseases such as solid tumours and cancer. The sequences  
CC given in records ABL70111-ABL70626 represent chemically pre-treated  
CC genomic DNA's of genes associated with cell signalling  
CC Note: The sequence data for this patent is not represented in the printed  
CC specification, but is based on sequence information supplied by the  
CC European Patent Office.

XX (EPIC-) EPIGENOMICS AG.

PI Olek A, Plepenbrock C, Berlin K;

DR WPI, 2001-602752/68.

XX Fragments of chemically modified genes associated with tumour suppressor  
PT genes and oncogenes, useful in designing primers and probes for  
PT analysing diseases associated with cytosine methylation state e.g.  
cancer -  
PS Claim 1, SEQ ID No 534; 27pp; English.

XX The invention relates to a nucleic acid comprising a sequence of 18  
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with

CC bisulphite, of genes associated with tumour suppression and  
CC sequences having a sequence taken from 536 (actually 533 since  
CC numbers 408, 458 and 500 are missing from the sequence listing) sequences  
CC (Ss) and sequences complementary to (Ss). The nucleic acid may be a  
CC peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may  
CC form part of a set of probes for detecting the cytosine methylation state  
CC and/or single nucleotide polymorphisms and also to be used in an  
CC array for analysing diseases associated with CpG dinucleotides e.g.  
CC cancers and tumours. The probes can also be used in a method for  
CC ascertaining genetic and/or epigenetic parameters for the diagnosis  
CC and/or therapy of existing diseases or the predisposition to specific  
CC diseases, by analysing cytosine methylations. The parameters may be  
CC compared to another set of genetic and/or epigenetic parameters, the  
CC differences serving as basis for diagnosis and/or prognosis events which  
CC are disadvantageous to patients. The present sequence is one of the  
CC 533 genomic sequences derived from tumour suppressor genes and  
CC oncogenes. Sequences with even numbered Seq ID numbers are the  
CC complementary sequence of the corresponding odd numbered sequence (e.g.  
CC ID 2 and ID1, ID 536 and ID 535, except for those whose partner sequence  
CC is missing).  
CC Note: The sequence data for this patent did not form part  
CC of the printed specification, but was obtained in electronic  
CC format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

PS Claim 1, SEQ ID NO 1987, 35p + Sequence Listing; German.

CC The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders including eye diseases such as retinopathy, neovascular glaucoma or macular degeneration, arteriosclerosis, anemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis or rheumatoid arthritis, psoriasis and inflammatory/alimentary bowel diseases. The present sequence is a gene of the invention.

XX New antisense oligonucleotides useful for treating e.g. pulmonary  
PT vasoconstriction, inflammation, allergies, asthma, hypertension,  
PT bronchitis, emphysema, respiratory distress syndrome, ischemia or  
XX cancers -  
XX  
XX Disclosure; Page 732-736; 1343pp; English.  
XX  
XX The present invention describes a new composition comprising an  
CC antisense oligonucleotide (ON) with low adenosine (up to 15%), which  
CC targets nucleic acids involved in bronchoconstriction, allergies, and/or  
CC inflammation. The ON can have antiinflammatory, antiallergic,  
CC antiasthmatic, cyostatic and analgesic activities. The compositions are  
CC useful for the treatment of diseases associated with inflammation,  
CC impaired airways, including lung disease and diseases whose secondary  
CC effects afflict the lungs of a subject. They can be used for treating  
CC e.g. ischemic conditions, pulmonary vasoconstriction, allergies,  
CC asthma, impeded respiration, respiratory distress syndrome, pain, cystic  
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
CC pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,  
CC carcinomas, and cancers which may metastasize to the lungs, including  
CC breast and prostate cancer. The reduction of the adenosine content of  
CC the ONs reduces side effects. The A-containing ONs break down with the  
CC release of deoxyadenosine which activates adenosine receptors causing  
CC bronchoconstriction and inflammation. AAA3213 to AAA5312 represent the  
CC nucleotide sequences given in the sequence listing from the present  
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last  
CC 185 sequences are also called SEQ ID NO:1 to 185, but the sequences  
CC differ from the previously named sequences. SEQ ID NO:11 to 1680  
CC (AAA3233 to AAA3392) are specifically claimed ONs from the present  
CC invention. N.B. Sequences given in the disclosure of the present  
CC invention do not match up with their corresponding SEQ ID NO: sequences  
CC given in the sequence listing.

XX Low adenosine (A) content antisense oligonucleotides which do not  
PT trigger adenosine receptors during metabolism, useful e.g. for treating  
PT cancers and respiratory obstructions -  
XX  
XX Disclosure; Page 808-813; 1592pp; English.  
XX  
XX The present invention describes low adenosine (A) content antisense  
CC oligonucleotides and compositions (I) comprising them. In the antisense  
CC oligonucleotides the A is replaced by a 'Universal' or alternative base.  
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,  
CC immunosuppressive, antiasthmatic, hypotensive and cyostatic activities.  
CC The antisense oligonucleotides and (I) can be used to down-regulate the  
CC expression and or activity of target polypeptides associated with  
CC lung/respiratory disorders and malignancies, such as stimulating and  
CC activating peptide factors and transmitters, transcription factors,  
CC immunoglobulins and antibodies, antibody receptors, cytokines and  
CC chemokines, endogenously produced specific and non-specific enzymes,  
CC binding proteins, adhesion molecules and their receptors, cytokine and  
CC chemokine receptors, adenosine receptors, bradykinin receptors, central  
CC nervous system (CNS) and peripheral nervous and non-nervous system  
CC receptors, CNS and peripheral nervous and non-nervous system peptide  
CC transmitters, defensins, growth factors, vasoactive peptides and  
CC receptors, binding proteins and malignancy associated proteins. The  
CC antisense oligonucleotides may be used in this way to treat disorders  
CC including respiratory obstruction (especially pulmonary obstruction  
CC and/or bronchoconstriction) and/or lung inflammation, allergy (ies)  
CC and/or surfactant hypoproduction which are associated with a disease or  
CC condition selected from pulmonary vasoconstriction, inflammation,  
CC allergic asthma, impeded respiration, respiratory distress syndrome  
CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary  
CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),  
CC pulmonary transplantation rejection, pulmonary infections, bronchitis,  
CC and/or cancer. AAF18434 to AAF21543 represent human polynucleotide  
CC fragments and antisense oligonucleotides used in the exemplification of  
CC the present invention.

PS Disclosure; Page 736-741; 1343pp; English.  
XX  
CC The present invention describes a new composition comprising an  
CC antisense oligonucleotide (ON) with low adenosine (up to 15%), which  
CC targets nucleic acids involved in bronchoconstriction, allergies, and/or  
CC inflammation. The ON can have antiinflammatory, antiallergic,  
CC antiasthmatic, cyostatic and analgesic activities. The compositions are  
CC useful for the treatment of diseases associated with inflammation,  
CC impaired airways, including lung disease and diseases whose secondary  
CC effects afflict the lungs of a subject. They can be used for treating  
CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies,  
CC asthma, impeded respiration, respiratory distress syndrome, pain, cystic  
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
CC pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,  
CC carcinomas, and cancers which may metastasise to the lungs, including  
CC breast and prostate cancer. The reduction of the adenosine content of  
CC the ONs reduces side effects. The A-containing ONs break down with the  
CC release of deoxyadenosine which activates adenosine receptors causing  
CC bronchoconstriction and inflammation. AAA32313 to AAA3312 represent the  
CC nucleotide sequences given in the sequence listing from the present

CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last  
CC 185 sequences are also called SEQ ID NO:1 to 185, but the sequences  
CC differ from the previously named sequences. SEQ ID NO:11 to 1680  
CC (AAA32323 to AAA33992) are specifically claimed ONs from the present  
CC invention. N.B. Sequences given in the disclosure of the present  
CC invention do not match up with their corresponding SEQ ID NO: sequences  
CC given in the sequence listing.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

; APPLICANT: Jian-Ming Gu and Charles T. Bamon
; TITLE OF INVENTION: ENDOTHELIAL SPECIFIC EXPRESSION
; TITLE OF INVENTION: REGULATED BY EPCR CONTROL ELEMENTS
; NUMBER OF SEQUENCES: 3
; CORRESPONDENCE ADDRESSES:
; ADDRESSEE: Patrea L. Pabst
; STREET: 2800 One Atlantic Center, 1201 West Peachtree Street
; CITY: Atlanta
; STATE: GA
; COUNTRY: USA
; ZIP: 30309-4530
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Floppy disk
; OPERATING SYSTEM: IBM PC compatible
; SOFTWARE: Patentin Release #1.0, Version #1.25
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/08/965,729A
; FILING DATE: 07-NOV-1997
; CLASSIFICATION:
; PRIORITY INFORMATION:
; APPLICATION NUMBER: US 60/030,718
; FILING DATE: 08-NOV-1997
; ATTORNEY/AGENT INFORMATION:
; NAME: Pabst, Patrea L.
; REGISTRATION NUMBER: 31,284
; REFERENCE/DOCKET NUMBER: OMRF 164 PCT
; TELECOMMUNICATION INFORMATION:
; TELEPHONE: 404-873-8795
; TELEFAX: 404-873-8794
; INFORMATION FOR SEQ ID NO: 1:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 3481 base pairs
; TYPE: nucleic acid
; STRANDEDNESS: single
; TOPOLOGY: linear
; MOLECULE TYPE: DNA (genomic)
; HYPOTHEICAL: NO
; ANTI-SENSE: NO
; FEATURE:
; NAME/KEY: misc feature
; OTHER INFORMATION: /note= "Nucleotides 2270 through 2840 are a
; OTHER INFORMATION: large endothelial specific element"; murine
; FEATURE:
; NAME/KEY: misc feature
; OTHER INFORMATION: /note= "Nucleotides 2990 through 3061 are a
; OTHER INFORMATION: serum response element"; murine
; FEATURE:
; NAME/KEY: misc feature
; OTHER INFORMATION: /note= "Nucleotides 3007 through 3014 are a
; OTHER INFORMATION: thrombin responsive element"; murine
; NAME/KEY: misc feature
; OTHER INFORMATION: /note= "Nucleotides 3130 through 3150 are an
; OTHER INFORMATION: endothelial specific element"; murine
; US-08-965-729A-1
Query Match 2.7%; Score 40.2; DB 4; Length 3481;
Best Local Similarity 52.7%; Pred. No. 0.076;
Matches 87; Conservative 0; Mismatches 78; Indels 0; Gaps 0;

Determination of this BAC-end sequence was carried out as part of a  
collaboration with the Berkeley Drosophila Genome Project (BDGP).  
The BDGP is constructing a physical map of the Drosophila  
melanogaster genome using these BACs. For further information  
please see <http://www.fruitfly.org> The BDGP Drosophila  
melanogaster BAC library was prepared by Kazuhiro Ohsawa and  
Aaron Mammossier in Piter de Jong's laboratory in the Department of  
Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,  
NY. The library is named RPCI-98 and was constructed by partial

COMMENT Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqrefgenoscope.cns.fr - Web : www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see <http://www.fruitfly.org/TheBDGP/Drosophila>

melanogaster BAC library was prepared by Kazuo Oosawa and Aaron Mammosser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain Y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at [http://bacpac.med.buffalo.edu/drosophila\\_bac.htm](http://bacpac.med.buffalo.edu/drosophila_bac.htm).

Based upon the presence of a XhoI site followed by a run of 14 or more T residues at the beginning of the sequence, this clone was polyadenylated. The resulting Poly-T sequence has been removed. hit genomic AB02960: Drosophila melanogaster genomic scaffold 14300013385601, complete sequence.: 02/23/2001

 /note="Organ: Eye; Vector: pCMVSPORT6; Post-mortem iris tissue was pooled from 10 individuals ranging in age from 4-80 years and RNA was extracted. From this pooled sample an aliquot of 60ug of total RNA yielded 2.1ug of mRNA. A directionally cloned cDNA library in the pCMVSPORT6 vector was constructed at Life Technologies, essentially following the protocols of the Superscript Plasmid System full details of which are contained in the manufacturer's instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adaptor [5'-TGACTAGTCTGATCGGAGCGGCC(CT)15-3'] . Not I blunt end inserts were cloned into the Not I/EcoR V sites in the vector. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."

PT	New vaccine for treatment of Schistosoma infections contains a recombinant fusion protein comprising cercarial elastase sequence fused to bacterial, phage or viral protein -

XX Claim 5; Page 18; 26pp; English.  
 PS  
 CC The invention provides a vaccine comprising a recombinant fusion protein  
 CC capable of eliciting immunity against Schistosoma parasites. The fusion  
 CC protein comprises the 27 or 28 kDa cercarial elastase sequence of  
 CC S. mansoni or an active fragment, homologue or variant, fused to a  
 CC bacterial, phage or viral protein. The vaccine containing the fusion  
 CC protein has been found to induce a significantly increased antibody  
 CC response against schistosoma infections, compared to the use of S.  
 CC mansoni cercarial elastase in its native form. The present sequence  
 CC represents the S. mansoni cercarial elastase protein fragment encoded by  
 CC exon 1 of the cercarial elastase gene, used in the fusion protein of the  
 CC invention.

 PT Identifying signal oligopeptide(s) in protein sequence(s) - shown as  
 PT regions of max. hydrophilicity, used in modulating communication  
 PT between protein(s)  
 XX  
 Claim 5; Page 70; 88pp; English.  
 PS  
 CC The sequences given in AAW21201-560 represent hydrophilic signal oligo-  
 CC peptides. These signal oligopeptides are localised on the surface  
 CC of the protein and are represented by the hydrophilicity maxima of  
 CC the protein. These peptides are enriched in charged amino acids  
 CC arranged with neutral spacer amino acids. The specific signal  
 CC character of these oligopeptides is determined by a characteristic  
 CC combination of conformation and charge within the signal sequence.  
 CC These oligopeptides may be used as vaccines in the treatment of  
 CC human disease, as competitive inhibitors to prevent or reduce the  
 CC metabolic action or interaction of a selected protein by blocking  
 CC its specific signal sequences, or as therapeutic agents to function  
 CC as feedback regulators to reduce synthesis rate of a selected protein.  
 CC These peptides may be modified by omitting one or more amino acids at  
 CC the N- and/or C-terminal, by substituting one or more amino acids  
 CC without consideration of charge and polarity, by substituting one or  
 CC more amino acids with amino acid residues with similar charge and/or  
 CC polarity, by omitting one or more amino acids or a combination of these.

XX Novel human disease detection and treatment polypeptide, useful in  
PT diagnosis, prevention or treatment of cell proliferative disorders e.g.  
PT arteriosclerosis, cirrhosis and an autoimmune/inflammatory disorder  
PT e.g. AIDS -  
XX  
XX Claim 14; Page 485-486; 618bp; English.  
PS  
XX The invention relates to an isolated human disease detection and  
CC treatment (MDDT) polypeptide (I) selected from a polypeptide having a  
CC sequence selected from 254 sequences (ABP51231-ABP51484) given in the  
CC specification, a naturally occurring polypeptide comprising a sequence  
CC having at least 90% identity to (I) or a biologically active or  
CC immunogenic fragment of (I). (I) is useful for screening a compound for  
CC effectiveness as an agonist or antagonist, for screening a compound that  
CC specifically binds (I) or modulates the activity of (I), and for  
CC preparing a polyclonal or monoclonal antibody by hybridoma technology.  
CC Nucleic acids (II) (ABQ72449-ABQ72700) encoding (I) are useful for  
CC screening a compound for effectiveness in altering expression of a target  
CC polynucleotide comprising. Oligonucleotides and antibodies are useful for  
CC detecting MDDT in a sample or for assessing toxicity of a test compound,  
CC in a diagnostic test for a condition or a disease associated with the  
CC expression of MDDT in a biological sample, for detecting (I) in a sample,  
CC and for purifying (I) from a sample. A composition comprising (I), an  
CC agonist or antagonist is useful for treating a disease or condition  
CC associated with decreased or increased expression of functional MDDT.  
CC (I) or (II) are useful for diagnosing, treating or preventing disorders  
CC associated with aberrant expression of MDDT, where the disorders are  
CC selected from a cell proliferative disorder such as arteriosclerosis,  
CC cirrhosis, hepatitis, psoriasis, and cancer and an  
CC autoimmune/inflammatory disorder such as AIDS, Addison's disease,  
CC allergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or  
CC rheumatoid arthritis. (II) are useful for creating knockin humanised  
CC animals or transgenic animals to model human diseases. In somatic or  
CC germ-line gene therapy, to generate a transcript image of a tissue or cell  
CC type, for detecting differences in the chromosomal location due to  
CC translocation or inversion among normal, carrier or affected individuals  
CC and as hybridisation probes for mapping naturally occurring genomic  
CC sequences.

FS

XX The invention relates to human diagnostic and therapeutic (dthp)  
 CC polynucleotides and their associated polypeptides (DTHP polypeptides).  
 CC The sequences of the invention are used in the treatment and diagnosis of  
 CC cell proliferative disorders (e.g. atherosclerosis, cirrhosis), cancers  
 CC (e.g. tumours of the adrenal gland, bone, bone marrow, brain, breast,  
 CC cervix, kidney, lung, ovary, pancreas, prostate, skin, spleen, testis or  
 CC thymus), autoimmune/inflammatory disorders (e.g. asthma, bronchitis,  
 CC psoriasis, osteoporosis), viral infections, bacterial infections, fungal  
 CC infections, parasitic infections, developmental disorders (e.g. anaemia,  
 CC epilepsy), seizure disorders (e.g. cerebral palsy, spina bifida),  
 CC endocrine disorders (e.g. thrombosis, aneurysm), metabolic disorders  
 CC (e.g. obesity, diabetes), neurological disorders (e.g. stroke,  
 CC amyotrophic lateral sclerosis, multiple sclerosis), gastrointestinal  
 CC disorders (e.g. ulcerative colitis, lysinuria) and transport disorders  
 CC (e.g. myotonic dystrophy, catatonias, peripheral neuropathy). Sequences  
 CC ABG59943-ABG60220 represent human DTHP polypeptides of the invention.

 PT enzyme using HMQC NMR for design of molecular structure of inhibitors  
 PT to the target enzyme -  
 XX  
 PS Example 2; Page 102-108; 140pp; Japanese.  
 XX  
 CC The invention relates to a novel method for determining the molecular  
 CC structure of an inhibitor to a target enzyme. The method of the invention  
 CC has antiviral activity. The method is useful for identification of  
 CC inhibitors to a target enzyme, in particular for use as anti-HIV (human  
 CC immunodeficiency virus) agents, without the need for X-ray  
 CC crystallography of the enzyme. The sequence represents a protein related  
 CC to the invention.

 PS Disclosure; Fig 24; 127pp; English.  
 XX  
 CC This invention describes a novel vascular endothelial growth factor-X  
 CC (VEGF-X) protein (ia) and its encoding polynucleotide (Iia) which has  
 CC vulnery, cytostatic, antirheumatic, antiarthritic, antiporiatic and  
 CC antidiabetic activity and acts as an angiogenesis and vascularization  
 CC regulator. An antisense molecule of the invention is useful for treating  
 CC or preventing cancer, rheumatoid arthritis, psoriasis and diabetic  
 CC retinopathy by inhibiting angiogenic activity or inappropriate  
 CC vascularization including formation and proliferation of new blood  
 CC vessels, growth and development of tissues, tissue regeneration and organ  
 CC and tissue repair in a subject. The products of the invention are useful  
 CC for preparing medicaments for treating wounds such as dermal ulcers,  
 CC pressure sores, venous sores, diabetic ulcers and burns and to promote  
 CC skin graft growth, tissue repair, proliferation of new blood vessels,  
 CC tissue regeneration and organ repair by promoting angiogenic activity or  
 CC vascularization. This sequence represents a human VEGF-X protein  
 CC PDGF-like domain which can be expressed in E. coli systems and which is  
 CC described in the method of the invention.

XX PT New isolated polynucleotide and encoded polypeptides, useful in  
PT diagnostics, forensics, gene mapping, identification of mutations  
PT responsible for genetic disorders or other traits and to assess  
PT biodiversity -  
XX PS Claim 20; SEQ ID No 46207; 103pp; English.  
XX CC The invention relates to isolated polynucleotide (I) and  
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,  
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome  
CC and gene mapping, and in recombinant production of (II). The  
CC polynucleotides are also used in diagnostics as expressed sequence tags  
CC for identifying expressed genes. (I) is useful in gene therapy techniques  
CC to restore normal activity of (II) or to treat disease states involving  
CC (II). (II) is useful for generating antibodies against it, detecting or  
CC quantitating a polypeptide in tissue, as molecular weight markers and as  
CC a food supplement. (II) and its binding partners are useful in medical  
CC imaging of sites expressing (II). (I) and (II) are useful for treating  
CC disorders involving aberrant protein expression or biological activity.  
CC The polypeptide and polynucleotide sequences have applications in  
CC diagnostics, forensics, gene mapping, identification of mutations  
CC responsible for genetic disorders or other traits to assess biodiversity  
CC and to produce other types of data and products dependent on DNA and  
CC amino acid sequences. ABG00010-ABG30377 represent novel human  
CC diagnostic amino acid sequences of the invention.  
CC Note: The sequence data for this patent did not appear in the printed  
CC specification, but was obtained in electronic format directly from WIPO  
XX at ftp.wipo.int/pub/published\_pct\_sequences.

XX a microbicide or detergent additive -  
XX  
PS Claim 3; Page 48-49; 49pp; English.  
XX  
CC This sequence represents a geniculosporium haloperoxidase protein of  
CC the invention. The invention also comprises the sequence of the  
CC geniculosporium haloperoxidase gene. Haloperoxidases may have  
CC antimicrobial, antibacterial and ophthalmological activities. The  
CC haloperoxidase protein is useful to catalyse the oxidation of a halide  
CC ion in the presence of peroxide (H<sub>2</sub>O<sub>2</sub>) and may be used in DNA  
CC recombination processes or to halogenate compounds. They may be added  
CC to detergent compositions or for killing or inhibiting growth of  
CC microbial cells. They may be also be used as preservatives or  
CC disinfectants in, e.g., paints, personal care products or contact lens  
CC cleaning products or in cleaning or bleaching compositions. The  
CC nucleotide and protein sequences given in the specification may also be  
CC used to design nucleic acid probes to identify and clone DNA encoding  
CC polypeptides with haloperoxidase activity.

PT New isolated nucleic acid sequence comprising a sequence encoding a  
XX polypeptide with haloperoxidase activity useful as a microbicide -  
XX  
PS Claim 1; Page 48-50; 50pp; English.  
XX  
CC The invention related to an isolated nucleic acid sequence comprising  
CC a sequence encoding a polypeptide with haloperoxidase activity.  
CC Haloperoxidase activity can be described as: antimicrobial,  
CC antibacterial and ophthalmological. The antibacterial activity of  
CC Geniculosporium sp. haloperoxidase was tested against *Escherichia coli*  
CC DSM 1576 using bromide as enhancing agent. A combination of 6 mM KBr,  
CC 1 mg/L enzyme and 1 mM H<sub>2</sub>O<sub>2</sub> gave complete kill of the bacteria.  
CC The nucleic acids encode polypeptides with haloperoxidase activity  
CC (i.e., they catalyse the oxidation of a halide ion in the presence of  
CC H<sub>2</sub>O<sub>2</sub>) and may be used in DNA recombination processes. They may be added  
CC to detergent compositions or for killing or inhibiting growth of  
CC microbial cells. They may be also be used as preservatives or  
CC disinfectants in, e.g., paints, personal care products or contact lens  
CC cleaning products or in cleaning or bleaching compositions. They may also  
CC be used in enzymatic bleaching applications, such as pulp bleaching and  
CC stain bleaching. Polypeptides and polynucleotides of the invention may  
CC also be used to design nucleic acid probes to identify and clone DNA  
CC encoding polypeptides with haloperoxidase activity. The current sequence  
CC represents a haloperoxidase amino acid sequence.

 PT Propionibacterium acnes polypeptides and nucleic acids useful for  
 PT vaccinating against and diagnosing infections, especially useful for  
 PT treating acne vulgaris -  
 XX  
 XX Example 1; SEQ ID NO 4403; 1069bp; English.  
 PS  
 CC Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic  
 CC polypeptides. The proteins and their associated DNA sequences are used in  
 CC the treatment, prevention and diagnosis of medical conditions caused by  
 CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,  
 CC pustulosis, hyperostosis and osteomyelitis), uveitis and endophthalmitis.  
 CC P. acnes is also involved in infections of bone, joints and the central  
 CC nervous system, however it is particularly involved in the inflammatory  
 CC lesions associated with acne vulgaris. A method for detecting the  
 CC presence or absence of P. acnes in a patient comprises contacting a  
 CC sample with a binding agent that binds to the proteins of the invention  
 CC and determining the amount of bound protein in the sample. The  
 CC polypeptides may be used as antigens in the production of antibodies  
 CC specific for P. acnes proteins. These antibodies can be used to  
 CC downregulate expression and activity of P. acnes polypeptides and  
 CC therefore treat P. acnes infections. The antibodies may also be used as  
 CC diagnostic agents for determining P. acnes presence, for example, by  
 CC enzyme linked immunosorbent assay (ELISA).  
 CC Note: The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at fcp.wipo.int/pub/published\_pct\_sequences.

 PT Novel nucleic acids and polypeptides, useful for treating disorders  
 PT such as central nervous system injuries -  
 XX  
 XX Example 2; SEQ ID NO 5683; 10078bp; English.  
 PS  
 CC The invention relates to human nucleic acids (AAI57798-AAI61369) and  
 CC the encoded polypeptides (AAM38642-AAM42213) with nootropic.  
 CC immunosuppressant and cytostatic activity. The polynucleotides are useful  
 CC in gene therapy. A composition containing a polypeptide or polynucleotide  
 CC of the invention may be used to treat diseases of the peripheral nervous  
 CC system, such as peripheral nervous injuries, peripheral neuropathy and  
 CC localised neuropathies and central nervous system diseases, such as  
 CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic  
 CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the  
 CC utilisation of the activities such as: Immune system suppression,  
 CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic  
 CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,  
 CC assays for receptor activity, arthritis and inflammation, leukaemias and  
 CC C.N.S disorders

PT Nucleic acids encoding polypeptides from Staphylococcus epidermidis,  
PT useful for vaccinating against infections, e.g. endocarditis -  
XX  
PS Claim 18; Page 517; 2188pp; English.  
XX  
CC AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides  
CC (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis.  
CC (I) and (II) can have antibacterial activity and therefore can be used  
CC in vaccination. The nucleic acids (I) may be used to produce the  
CC S. epidermidis polypeptides (II) via the production of vectors  
CC containing them which are used to produce hosts cells which express the  
CC polypeptides. The polypeptides (II) (and/or nucleic acids) may then be  
CC used to vaccinate subjects and to raise antibodies against the bacteria.  
CC The polypeptides may also be used to assay for other inhibitors of their  
CC activity and therefore identify compounds that may be used for the  
CC treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to  
CC AAH55090 represent specifically claimed S. epidermidis genomic DNA  
CC polynucleotide sequences from the present invention. AAH55091 to  
CC AAH55098 represent oligonucleotide sequences and primers which are used  
CC in the exemplification of the present invention.  
CC N.B. The present invention specifically claims all the polynucleotide  
CC sequences given in the sequence listing of the present specification,  
CC however the sequence listing only goes up to SEQ ID NO:4454 so even  
CC though sequences are given in the disclosure for SEQ ID NO:4465 to 4472,  
CC no sequences are present for SEQ ID NO:4455 to 4464.

PT responsible for genetic disorders or other traits and to assess

PT biodiversity -  
 XX  
 PS Claim 20; SEQ ID NO 40963; 103bp; English.  
 XX  
 CC The invention relates to isolated polynucleotide (I) and  
 CC polypeptide (II) sequences. (I) is useful as hybridization probes,  
 CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome  
 CC and gene mapping, and in recombinant production of (II). The  
 CC polynucleotides are also used in diagnostics as expressed sequence tags  
 CC for identifying expressed genes. (I) is useful in gene therapy techniques  
 CC to restore normal activity of (II) or to treat disease states involving  
 CC (II). (II) is useful for generating antibodies against it, detecting or  
 CC quantitating a polypeptide in tissue, as molecular weight markers and as  
 CC a food supplement. (II) and its binding partners are useful in medical  
 CC imaging of sites expressing (II). (I) and (II) are useful for treating  
 CC disorders involving aberrant protein expression or biological activity.  
 CC The polypeptide and polynucleotide sequences have applications in  
 CC diagnostics, forensics, gene mapping, identification of mutations  
 CC responsible for genetic disorders or other traits to assess biodiversity  
 CC and to produce other types of data and products dependent on DNA and  
 CC amino acid sequences. ABG00010-ABG30377 represent novel human  
 CC diagnostic amino acid sequences.  
 CC Note: The sequence data for this patent did not appear in the printed  
 CC specification, but was obtained in electronic format directly from WIPO

 PT New isolated nucleic acid detection reagent for detecting 1000 or more  
 PT genes from Drosophila and for elucidating cell signalling and cell-cell  
 PT interactions -  
 XX  
 PS Disclosure; SEQ ID NO 31209; 21bp + Sequence Listing; English.

XX  
 CC The invention relates to an isolated nucleic acid detection reagent  
 CC capable of detecting 1000 or more genes from Drosophila. The invention is  
 CC useful in developmental biology and in elucidating cell signalling and  
 CC cell-cell interactions in higher eukaryotes for the development of  
 CC insecticides, therapeutics and pharmaceutical drugs. The invention  
 CC discloses genomic DNA sequences (AB116176-AB130511), expressed DNA  
 CC sequences (AB101840-AB116175) and the encoded proteins  
 CC (AB57737-AB572072).  
 CC The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences.

XX  
PS Claim 103; Page 562-563; 641pp; English.  
CC AAA16618 to AAA16637 encode the human secreted proteins given in  
CC AAY94898 to AAY94980, isolated from human adult brain, adult thyroid,  
CC adult retina, foetal carcinoma, adult blood, adult neural, foetal kidney,  
CC adult placenta, adult testis, whole embryo, adult cartilage, kidney,  
CC foetal brain, adult thymus, foetal placenta, adult uterus, adult tumour,  
CC and adult bladder, cDNA libraries. The polynucleotides and proteins are  
CC predicted to have biological activities which would make them suitable  
CC for treating, preventing or ameliorating medical conditions in humans  
CC and animals. The polynucleotides can be used as markers for tissues in  
CC which the protein is preferentially expressed, as molecular weight  
CC markers on Southern gels, and as chromosome markers or tags to identify  
CC chromosomes or to map gene positions. The proteins can be used in the  
CC treatment of immune deficiencies and disorders, such as severe combined  
CC immunodeficiency (SCID), as well as viral, bacterial, fungal and other  
CC infections. These infections include human immunodeficiency virus (HIV),  
CC hepatitis, herpesviruses, mycobacteria, leishmania spp., malaria and  
CC candidiasis. The proteins can be used to treat autoimmune disorders such  
CC as connective tissue disease, multiple sclerosis, systemic lupus  
CC erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation,  
CC Guillain-Barre syndrome, autoimmune thyroiditis, insulin dependent  
CC diabetes mellitus, myasthenia gravis, graft-versus-host disease and  
CC autoimmune inflammatory eye disease. The proteins can also be used to  
CC treat allergic conditions, such as asthma. AAA16598 to AAA16774 represent  
CC probes for the human secreted proteins from the present invention.

PT Novel nucleic acids and polypeptides, useful for treating disorders  
PT such as central nervous system injuries -  
XX  
PS Example 3; SEQ ID NO 2111; 10078pp; English.  
XX  
CC The invention relates to human nucleic acids (AAI57798-AAI61369) and  
CC the encoded polypeptides (AAM38642-AAM42213) with noctropic,  
CC immunosuppressant and cyostatic activity. The polynucleotides are useful  
CC in gene therapy. A composition containing a polypeptide or polynucleotide  
CC of the invention may be used to treat diseases of the peripheral nervous  
CC system, such as peripheral nervous injuries, peripheral neuropathy and  
CC localised neuropathies and central nervous system diseases, such as  
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic  
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the  
CC utilisation of the activities such as: Immune system suppression,  
CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic  
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,  
CC assays for receptor activity, arthritis and inflammation, leukemias and  
CC C.N.S disorders.

PT New isolated nucleic acid detection reagent for detecting 1000 or more  
PT genes from Drosophila and for elucidating cell signalling and cell-cell  
PT interactions -  
XX

PS Disclosure; SEQ ID NO 10371; 21pp + Sequence Listing; English.  
XX  
CC The invention relates to an isolated nucleic acid detection reagent  
CC capable of detecting 1000 or more genes from Drosophila. The invention is  
CC useful in developmental biology and in elucidating cell signalling and  
CC cell-cell interactions in higher eukaryotes for the development of  
CC insecticides, therapeutics and pharmaceutical drugs. The invention  
CC discloses genomic DNA sequences (ABL01840-ABL16175), expressed DNA  
CC sequences (ABL01840-ABL16175) and the encoded proteins  
CC (ABR57737-ABR72072).  
CC The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

PT New isolated polynucleotide and encoded polypeptides, useful in  
PT diagnostics, forensics, gene mapping, identification of mutations  
PT responsible for genetic disorders or other traits and to assess  
PT biodiversity -  
XX  
PS Claim 20; SEQ ID No 60313; 103pp; English.  
XX  
CC The invention relates to isolated polynucleotide (I) and  
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,  
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome  
CC and gene mapping, and in recombinant production of (II). The  
CC polynucleotides are also used in diagnostics as expressed sequence tags  
CC for identifying expressed genes. (I) is useful in gene therapy techniques  
CC to restore normal activity of (II) or to treat disease states involving  
CC (II). (II) is useful for generating antibodies against it, detecting or  
CC quantitating a polypeptide in tissue, as molecular weight markers and as  
CC a food supplement. (II) and its binding partners are useful in medical

CC imaging of sites expressing (II). (I and (II) are useful for treating  
CC disorders involving aberrant protein expression or biological activity.  
CC The polypeptide and polynucleotide sequences have applications in  
CC diagnostics, forensics, gene mapping, identification of mutations  
CC responsible for genetic disorders or other traits to assess biodiversity  
CC and to produce other types of data and products dependent on DNA and  
CC amino acid sequences. ABG00010-ABG30377 represent novel human  
CC diagnostic amino acid sequences of the invention.  
CC Note: The sequence data for this patent did not appear in the printed  
CC specification, but was obtained in electronic format directly from WHO  
CC at [ftp.who.int/pub/published\\_pct\\_sequences](http://who.int/pub/published_pct_sequences).

PT	New nucleic acid molecules encoding 461 human secreted proteins for	
PT	diagnosing, preventing, treating or ameliorating medical conditions and	
PT	used as food additives or preservatives -	
PT		
PS	Claim 11; SEQ ID No 1362; 980bp; English.	
XX		
XX		
CC	The invention relates to isolated nucleic acid molecules and their	
CC	encoded secreted proteins. The nucleic acids and proteins are used to	
CC	prevent, treat or ameliorate a medical condition in e.g. humans, mice,	
CC	rabbits, goats, horses, cats, dogs, chickens or sheep. They	
CC	are also used in diagnosing a pathological condition or susceptibility	
CC	to a pathological condition. Antibodies to the proteins can also	
CC	be used in alleviating symptoms associated with the disorders and in	
CC	diagnostic immunoassays e.g. radioimmunoassays or enzyme linked	
CC	immunosorbent assays (ELISA). Disorders which are diagnosed or treated	
CC	include autoimmune diseases e.g. rheumatoid arthritis,	
CC	hyperproliferative disorders e.g. neoplasms of the breast or liver,	
CC	cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders	
CC	e.g. cerebral ischaemia, anglogenesis, nervous system disorders e.g.	
CC	Alzheimer's disease, infections caused by bacteria, viruses and fungi	
CC	and ocular disorders e.g. corneal infection, and many other	
CC	disorders listed in the specification. The polypeptides can also	
CC	be used to aid wound healing and epithelial cell proliferation, to	
CC	prevent skin aging due to sunburn, to maintain organs before	
CC	transplantation, for supporting cell culture of primary tissues, to	
CC	regenerate tissues and in chemotaxis. The polypeptides can also be used	

CC as a food additive or preservative to increase or decrease storage  
 CC capabilities, fat content, lipid, protein, carboxylate, vitamins,  
 CC minerals, cofactors and other nutritional components. The present  
 CC sequence represents a novel secreted protein of the invention.

PT Novel isolated nucleic acids comprising sequences encoding peptides  
 useful for treating or diagnosing e.g. cancer -

PS Claim 11; Page 1987-1991; 2352pp; English.

XX AAC77607 to AAC78448 encode the human cancer associated proteins given  
 CC in AAB43398 to AAB44233. The proteins can have activities based on the  
 CC tissues and cells the genes are expressed in. Example of activities  
 CC include: cytostatic; proliferative; vulnerary; immunomodulator;  
 CC antidiabetic; antiaesthetic; antirheumatic; antiarthritic;  
 CC antiinflammatory; antihypoid; antiallergic; antibacterial; antiviral;  
 CC dermatologic; neuroprotective; cardiac; thrombolytic; coagulant;  
 CC neotropic; vasotropic; antiprotic and antiangiogenic. The  
 CC polynucleotides and polypeptides can be used for preventing, treating or  
 CC ameliorating medical conditions and diagnosing pathological conditions.  
 CC Polynucleotides, polypeptides, antibodies, agonists and antagonists from  
 CC the present invention may be used to treat immune disorders by activating  
 CC or inhibiting the proliferation, differentiation or mobilisation of  
 CC immune cells, to treat disorders of haematopoietic cells, autoimmune  
 CC disorders, allergic reactions, graft versus host disease and organ  
 CC rejection, modulate haemostatic or thrombolytic activity, modulate

CC inflammation, cancers, cardiovascular disorders, neurological disease and  
 CC bacterial or viral infections. The peptides, nucleotides, antibodies,  
 CC agonists and antagonists may be also be used in drug screens. AAC78449 to  
 CC AAC78457 and AAB44240 represent sequences used in the exemplification of  
 CC the present invention.

XX Mouse and human metastasis-associated p150-derived antigens - useful
PT for raising antibodies for therapy and diagnosis of tumours
XX
XX Claim 3; Page 86-91; 11pp; English.
PS
XX
XX This protein comprises a novel human 150 kDa cell surface
CC metastasis-associated antigen, designated p150. It is the
CC homologue of a novel murine p150 metastasis-associated antigen (see
CC AAW31866). Its amino acid sequence was deduced from an isolated cDNA
CC clone (see AAT93627). A claimed method for determining the
CC metastatic potential of a tumour cell comprises assessing the level
CC of p150 expression in the cell, a higher level of p150 expression
CC being indicative of a lower state of differentiation and
CC consequently a higher metastatic potential. Immunogenic
CC determinants of p150 and antibodies raised against them are
CC useful in the diagnosis and treatment of metastatic potential in
CC tumours.

PT genes -
XX
XX Claim 2; Page 1230-1241; 2690pp; English.
PS
XX
XX The present invention describes a method for examining ischemic
CC conditions, comprising measuring the expression levels of particular
CC genes (I) in a test sample or determining the expression profile of a
CC gene group in the sample comprising genes selected from (I). The method
CC is useful for examining the ischemic condition (e.g. compressive
CC ischemia, occlusive ischemia or vasospastic ischemia) by measuring
CC expression levels of particular genes (ABI99202 to ABI99912, encoding
CC the protein sequences in ABB57020 to ABB57374) or by determining the
CC expression profile of a gene group comprising these genes. The
CC expression levels or expression profiles produced by these genes are
CC used as an indicator when screening for ischemic condition-improving
CC drugs or therapeutics for ischemic diseases. ABI99913 and ABI99914
CC represent PCR primers for a mouse ischemic condition related sequence,
CC which are used in the exemplification of the present invention.

 PT New nucleic acid sequences expressed in normal pancreatic tissues, and  
 PT derived polypeptides, for treatment of pancreatic cancer and  
 PT identification of therapeutic agents  
 XX  
 PS Claim 23; Page 71; 92pp; German.  
 XX  
 CC This invention describes novel cDNA sequences (A) that are highly  
 CC expressed in normal human pancreatic tissue and which have anticancer  
 CC and cytostatic activity. (A) are used (i) for recombinant expression of  
 CC polypeptides (B) and (ii) to isolate complete genes. (B) are used (i) to  
 CC identify agents suitable for treatment of pancreatic cancer; (ii)  
 CC directly for treating this form of cancer (including expression from  
 CC gene therapy vectors) and (iii) for generation of specific antibodies.  
 CC (A) are identified by assembling ESTs (expressed sequence tags) from a  
 CC particular tissue type before comparison of expression patterns. This  
 CC allows a significantly longer fragment of the gene to be revealed, so  
 CC should reduce the number of failures associated with the fact that ESTs  
 CC from different libraries may represent different parts of the same  
 CC unknown gene, distorting the estimated frequency of occurrence in a  
 CC particular tissue. AAY59893-Y59920 represent protein fragments encoded  
 CC from the human normal pancreatic tissue derived cDNA fragments  
 CC represented in AA241386-Z41423.

CC relates to expression constructs comprising a promoter of the invention  
CC and DNA encoding the signal peptide, and transgenic plants and plant  
CC cells comprising the expression vector. The method of the invention is  
CC useful for the efficient production of a foreign protein in a plant, and  
CC enables the recombinantly produced protein to be easily collected. The  
CC present sequence represents cucumber XSP4.

PT New isolated nucleic acid encoding a protein for diagnosing,  
PT preventing, treating or ameliorating medical conditions and used as  
PT food additives or preservatives -  
XX  
XX  
XX Claim 9; SEQ ID No 687; 837bp; English.  
XX  
XX The invention describes an isolated nucleic acid molecule (I) encoding a  
XX novel central nervous system protein. (I) and polypeptides (III) encoded  
XX by (I), are used to treat a medical conditions and in diagnosis of a  
XX pathological condition. Disorders which are diagnosed or treated include  
XX autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative  
XX disorders e.g. neoplasms of the breast or liver, cardiovascular disorders  
XX e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,  
XX angiogenesis, nervous system disorders e.g. Alzheimer's disease and  
XX amyotrophic lateral sclerosis, infections caused by bacteria, viruses  
XX e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders  
XX e.g. corneal infection, gastrointestinal disorders e.g. dysphagia,  
XX adenocarcinomas and irritable bowel syndrome, reproductive system  
XX disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes  
XX and pituitary dwarfism, cancers and disorders at the cellular level e.g.  
XX leukaemia, disorders involving neovascularisation e.g. malignancies,  
XX respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g.  
XX acute kidney failure and blood related disorders e.g. myocardial  
XX infarction. The polypeptides can also be used to aid wound healing and  
XX epithelial cell proliferation, to prevent skin aging due to sunburn, to  
XX maintain organs before transplantation, for supporting cell culture of  
XX primary tissues, to regenerate tissues and in chemotaxis. The  
XX polypeptides can also be used as a food additive or preservative to

CC increase or decrease storage capabilities, fat content, lipid, protein,

XX Claim 26; Fig 5; 84pp; English.

XX The invention relates to a method for enhancing environmental stress  
XX tolerance or salt toxicity in eukaryotic cells and organisms by  
XX manipulating the process of processing messenger RNA precursors. The  
XX invention also relates to isolated nucleic acids (Beta vulgaris genes  
XX that enhance salt tolerance, Mus musculus gene that encode small unit  
XX of U2 snRNP auxiliary factor protein) encoding a protein or  
XX immunologically active and/or functional fragment of it, involved in  
XX salt tolerance. The method is useful for enhancing stress tolerance  
XX comprising tolerance against osmotic, drought, cold or freezing stress  
XX and salt toxicity in cells and organisms. The isolated nucleic acid in  
XX an expressible format is useful in the production of transgenic or  
XX altered plants, plant cells or plant tissues. The nucleic acids are also  
XX useful for enhancing or altering stress tolerance in a plant, for  
XX increasing the plant yield and for stimulating plant growth, which can  
XX be in any part of the plant, such as root, leaf or seed. The present  
XX sequence is mouse U2 snRNP auxiliary factor protein capable of  
XX enhancing salt tolerance.
